Acknowledgments

Many persons participated in the diverse activities of the 1980 census. These acknowledgments generally reflect staff during the post-census data publication process. The Bureau was guided by Director, **Bruce Chapman**, and Deputy Director, **C.L. Kincannon**. Primary direction of the data publication program was performed by **William P. Butz**, Associate Director for Demographic Fields, assisted by **Peter A. Bounpane**, Assistant Director for Demographic Censuses, in conjunction with **Barbara A. Bailar**, Associate Director for Statistical Standards and Methodology, **Howard N. Hamilton**, Acting Associate Director for Information Technology, **James D. Lincoln**, then Associate Director for Administration, and **Stanley D. Moore**, Associate Director for Field Operations. The Director's staff was assisted by **Sherry L. Courtland**. Direction of the census enumeration and early processing activities was provided by **Vincent P. Barabba**, former Director; **Daniel B. Levine**, former Deputy Director; and **George E. Hall**, former Associate Director.

Responsibility for the overall planning, coordinating, processing, and publication of the 1980 census was in the Decennial Census Division under the direction of **Stanley D. Matchett**, Chief, assisted by **Rachel F. Brown** and **Roger O. Lepage**, Assistant Division Chiefs. The following Branch Chiefs were responsible for support services; **Donald R. Dalzell, H. Ray Dennis, Stephen E. Goldman, Dennis W. Stoudt**, and **Richard R. Warren**.

The Components of Inventory Change Survey was planned, directed, and written in the Housing Division under the supervision of **Arthur F. Young**, Chief; **Leonard J. Norry**, Assistant Chief; and **Edward D. Montfort**, Branch Chief. This report was coordinated by **Elmo E. Beach** assisted by **Jane S. Maynard**. Important contributions were made by **Stuert M. Kaufman** and **H. Watson Pryor**.

Computer programming was the responsibility of Demographic Surveys Division under the direction of **Thomas C. Walsh**, Chief; **B. Gregory Russell** and **Robert Munsey**, Assistant Chiefs; and **John C. Cannon** and **D. Richard Bartlett**, Branch Chiefs. Important contributions were made by **Leon D. Martin** and **Maria A. Mochulski**.

Data collection activities were supervised in the Field Division by **Lawrence T. Love**, Chief, under the direction of **George T. Reiner**, Assistant Chief and **Howard C. Beattie**, Branch Chief, as well as the directors and assistant directors of the Bureau's regional offices. Important contributions were made by **William J. Phalen**.

Publications editing, design, composition, and printing procurement were performed by the staff of the Publications Services Division, **Raymond J. Koski**, Chief; **Milton S. Andersen, Arlene C. Duckett**, and **Gerald A. Mann**, Branch Chiefs.

The Statistical Methods Division was largely responsible for planning the sample design, weighting, and computation of sampling variances, and standard errors. This work was supervised by **Charles D. Jones**, Chief; and **Gary Shapiro**, Assistant Chief; **Leonard Baer, John Paletta**, and **Dennis Schwanz**, Branch Chiefs. Important contributions were made by **Florence Abramson, James Hartman, Donald Luery**, and **Fay Nash**.

Many other persons participated in the various activities of the 1980 census. For a list of key personnel, refer to the *History of the 1980 Census of Population and Housing*, (PHC80-R2).

Table Finding Guide— Simple Distribution of Subjects by Table Number

This guide lists all subjects covered in this report but does not indicate cross-classification (e.g. 1973 by 1980 characteristics for same units). The following symbols indicate those tables which present data for housing units of a selected racial group and with a householder of Spanish origin: # indicates data for a White householder; * indicates data for a Black householder; † indicates data for a householder of Spanish origin. Tables with prefix letter "A" are for the United States total, "B" for the Northeast Region, "C" for the North Central Region, "D" for the South Region, and "E" for the West Region. For a description of area classifications, see appendix A. For definitions and explanations of subject characteristics see appendix B.

SAMPLE SIZE VIII
QUALIFICATIONS OF THE DATA VIII

GENERAL

This report series presents sample data on the counts and characteristics of the components of change in the housing inventory for the period October 1973 to October 1980 for the United States and each of the four geographic regions. The components of change in the housing inventory consist of new construction, conversions, and other additions; and mergers, demolitions, and other losses; as well as housing units that were the same in 1980 as in 1973. (For definitions of components, see Appendix B, "Definitions and Explanations of Subject Characteristics.") The abbreviated identification for this report series is HC80-4 (i.e., Housing Census, 1980-Volume 4). Legal provision for this survey was made in the Act of Congress of August 31, 1954 (amended August 1957, December 1975, and October 1976), which codified Title 13, United States Code. Although the Components of Inventory Change (CINCH) Survey was conducted as a part of the 1980 census, interviewing occurred in conjunction with the 1980 Annual Housing Survey (AHS) which was sponsored by the Department of Housing and Urban Development (HUD).

This report series (HC80-4) consists of three publications issued as a part of the 1980 Census of Housing. Part I covers the United States and regions and presents data by inside and outside Standard Metropolitan Statistical Areas (SMSA's). In addition, statistics for "inside SMSA's" are shown separately for housing units "in central cities" and "not in central cities." Part II presents data for two size groupings of SMSA's for the United States and regions for housing units "in central cities" and "not in central cities." Section A covers that group of SMSA's (not individually identified) with populations of one million or more at the time of the 1970 census; Section B covers that group of SMSA's (not individually identified) with populations of less than one million at the time of the 1970 census.

A large part of the content and procedures of the 1980 CINCH was dictated by procedures already established for the AHS. The AHS procedures were determined after consultation with a variety of users of housing data and through field pretesting. However, the enumeration and processing procedures used in AHS were modified and supplemented to accomodate the additional information needed for CINCH.

Definitions for various characteristics that were measured in the 1980 CINCH Survey, the 1970 CINCH Survey, the 1980 Annual Housing Survey, and the 1980 census differ slightly. (Detailed information on the relationship of the CINCH Survey to other current surveys and censuses appears in Appendix A, "Area Classifications" and Appendix B, "Definitions and Explanations of Subject Characteristics.")

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

CONTENTS OF THE REPORT

This report contains text (this introduction and six appendixes), a table finding guide, table of contents, maps, charts, highlights (includes summary tables), and detailed tables. The table finding guide at the front of this report lists the characteristics and the various race/Spanish-origin groups covered in this report and shows the tables in which the various types of statistics appear. The "stubhead" at the left of each table, under the title, defines the types of geographic areas for which data are shown in the particular table and is considered part of the table title.

Two maps of the United States, one showing 1970 Standard Metropolitan Statistical Areas (SMSA's), another showing the regions and geographic divisions of the United States follow the table of contents.

Summary tables A through F in the "Highlights" (following the maps) present the total number of units for each component. Table A presents units comprising the source of the 1980 inventory, table B the disposition of the 1973 inventory, and table C the net change in the housing stock between 1973 and 1980 for the United States and regions. Tables D through F repeat the information contained in tables A through C for housing units with White householders, Black Householders, and householders of Spanish origin for the United States. (See the section, "Householder," in Appendix B, "Definitions and Explanations of Subject Characteristics.") The numbers presented in these tables, as well as all other tables in this report, are rounded to the nearest thousand.

A series of detailed charts which depict the components follow the sum-

mary tables. These charts are followed by the detailed CINCH tables. Tables A-1 through A-6 present simple distributions of the 1980 and/or 1973 inventories. Table A-1 presents general characteristics of the total 1980 and 1973 inventories and table A-2 presents financial characteristics of the 1980 and 1973 inventories. Table A-3 presents 1980 general characteristics and Table A-4 presents 1980 financial characteristics for each component of change of the 1980 inventory. Table A-5 presents 1973 general characteristics and table A-6 presents 1973 financial characteristics for each component of change of the 1973 inventory.

The subject matter shown in tables A-1 through A-6 is also presented for housing units with White householders in tables A-7 through A-12, for housing units with Black householders in tables A-13 through A-18, and for housing units with householders of Spanish origin in tables A-19 through A-24.

These tables are followed by a set of tables (SA-1A through SA-7C) which present cross-tabulations of selected 1980 characteristics by 1973 characteristics for units classified as "same." These tables are presented for housing units with White householders, Black householders, and householders of Spanish and not of Spanish origin. For these tables, the prefix "S" denotes the type of component (i.e., same). This is followed by a letter which denotes area. "A" represents the United States, "B" represents the Northeast Region, "C" represents the North Central Region, "D" represents the South Region,and "E" represents the West Region. The letter following the number (e.g., SA-1A) indicates the universe, i.e., "A" represents total, "B" represents race, and "C" represents Spanish/Non-Spanish origin. The letter following the number does not appear in the same unit tables for regions because separate data for race and Spanish origin are not provided for regions. For more information, see the Table Finding Guide and the Contents.

The appendixes appear after the data tables in this report. Appendix A describes the various area classifications. Appendix B provides definitions and explanations for the subjects covered in this report. Appendix C describes the general data collection and processing procedures. Appendix D presents information on sample design, estimation, and accuracy of the data. Appendix E contains facsimiles of the CINCH survey forms. Appendix F summarizes the data dissemination program of the 1980 census survey forms.

DERIVED FIGURES (Medians and Percents)

This report presents medians and percents, as well as certain ratios. The median—a type of average—is the middle value in a distribution; i.e., the median divides the distribution into two equal parts; one-half of all cases fall below the median and one-half of all cases exceed the median.

Medians for rooms, persons, and years of school completed by householder are rounded to the nearest tenth. Medians for selected monthly housing costs as a percentage of income are rounded to the nearest percent. Medians for value and income are rounded to the nearest hundred dollars; rent, real estate taxes last year, monthly mortgage payment, and selected monthly housing costs are rounded to the nearest dollar. In computing median rent, units reported as "no cash rent" are excluded. For selected monthly housing costs as a percentage of income, units in the category "Not computed" are excluded. "Not reported" categories are also excluded from the computation of medians. In computing medians for rooms and persons, the whole number is used as the midpoint of the interval so that, for example, the category "3 rooms" is treated as an interval ranging from 2.5 up to 3.5 rooms.

The median number of school years completed by the householder was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the first year of high school was treated as completion of the 9th year and completion of the first year of college as completion of the 13th year, etc.). Householders completing a given school year were assumed to be distributed evenly within the interval from .0 to .9 of the year. Because of the inexact assumption as to the distribution within an interval, the median school years completed is more appropriately used for comparing different groups and the same group at different dates than as an absolute measure of educational attainment.

The medians and percents for 1980 and 1973 are generally computed on the basis of the distributions as shown in the report which may vary between tables. As a result, a median or percent for the same characteristic and universe may vary somewhat between tables. When a median falls in the lower terminal category of an open-ended distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category "Less than $10,000," it is shown as "$10,000–." When the median falls in the upper terminal category of an open-ended distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; for example, if the median falls in the category "$300,000 or more," it is shown as "$300,000+."

SYMBOLS AND GEOGRAPHIC ABBREVIATIONS

The following symbols and geographic abbreviations are used in the tables:

- A dash "–" represents zero or a percent which rounds to less than 0.1.
- Three dots ". . ." mean not applicable or that derived measures are not shown when the base is less than 25 sample cases.
- (NA) means not available.
- SMSA signifies standard metropolitan statistical area.

ADDITIONAL DATA

A large number of tabulations, not included in the CINCH printed reports, have been prepared to meet the special needs of data users. These special projects data are available in two forms. Paper photocopies are available for specific tables at the cost of reproduction. Microfiche copies of these data are also available by the set. An index to the special projects CINCH data can be obtained free of charge by contacting the Housing Division, Bureau of the Census, Washington, D.C. 20233.

SAMPLE SIZE

The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. The designated sample for 1980 CINCH consisted of approximately 64,000 1980 sample units located throughout the United States. The original 1973 AHS sample consisted of approximately 49,000 sample units. The 1980 sample was expanded to obtain more accurate counts and characteristics of all components, particularly for conversions, mergers, and housing units created from nonresidential space. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data are given in Appendix D, "Accuracy of the Data."

QUALIFICATIONS OF THE DATA

In making comparisons between the 1980 Components of Inventory Change Survey and the 1980 Census of Housing, differences in the data may reflect such factors as the use of direct interview for the 1980 CINCH contrasted with the extensive use of self-enumeration in the census. Differences may also be attributed to the CINCH sample design, the estimation procedure used, the sampling variability of the estimates, and the processing procedures.(For a further discussion, see the section "Comparability with 1980 Census of Housing Data" in Appendix B, "Definitions and Explanations of Subject Characteristics.")

Because the 1973 and 1980 estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census, using the same questionnaires, instructions, and interviewers. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of sample cases, as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability. (For a further discussion of accuracy of the data, see Appendix D, "Accuracy of the Data.") Statistics on value, rent, and income for both 1973 and 1980 are measured in current dollars (the value at the time the data were collected). Therefore a significant part of the increase between 1973 and 1980 reflects the 85.4 percent rise in the cost of living during the 7 year period, as measured by the Consumer Price Index, in addition to changes in the housing inventory.

In this report, statistics on income relate to the income of the family or primary individual. Incomes of persons living in the unit but not related to the householder are not included. Statistics on some of the characteristics shown are based on restricted universes, and therefore, care should be exercised in relating the statistics for one characteristic to another. For example, value is restricted to owner-occupied, 1-unit structures on less than 10 acres without a commercial establishment or medical office on the property, and gross rent is restricted to renter-occupied units, excluding 1-unit structures on 10 acres or more.Therefore, the totals for owner-occupied units in the "value" universe and for renter-occupied units in the "gross rent" universe do not coincide with the respective totals for owner-occupied or renter-occupied units for the "income" universe.

For a more detailed discussion on the definitions and qualifications of all items in this report, see Appendix B, "Definitions and Explanations of Subject Characteristics." For a more detailed discussion on the reliability of the data, see Appendix D, "Accuracy of the Data."

Highlights

GENERAL

Between October 1973 and October 1980 the housing inventory of the United States increased from 77,246,000 to 89,292,000, a net gain of 12,046,000 units or approximately 16 percent. This gain reflected the net effect of additions to and losses from the housing inventory occurring during the 7-year period. Additions include units added through conversions from fewer to more units; new construction; houses or mobile homes moved in; space changed from nonresidential to residential use; units resulting from the rehabilitation of structures that were vacant and condemned, damaged, or exposed to the elements; and "other" types of additions to the inventory made since 1973 such as "group quarters" changed to housing units as well as certain residual additions. Losses include units lost through mergers from more to fewer units; demolition and disaster losses; houses or mobile homes moved out; units changed from residential to nonresidential use; units that became vacant and were condemned, damaged, or exposed to the elements; and "other" types of losses from the inventory since 1973 such as housing units changed to "group quarters" and certain residual losses. Also included in CINCH are data on same units; i.e., living quarters which existed as the same number of housing units in 1973 and 1980, even though the unit may have been remodeled.

Data detailing the various sources of additions and losses as well as same units are presented in tables A through F. Tables A, B, and C provide data for the total inventory for the United States and each of the four regions by "inside SMSA's," by "in central cities" and "not in central cities," and by "outside SMSA's." Tables D, E, and F provide similar data for the United States for housing units with a White householder, a Black householder, and for a householder of Spanish origin in 1973 or 1980.

DATA SUMMARY

Table A shows that the sources of the 1980 housing inventory were as follows:

- 925,000 1980 units resulted from the conversion of 384,000 1973 units (table B) for a net gain of 541,000 units.
- 13,119,000 units were new construction, i.e., units built after 1973 and still in existence in 1980 (approximately 15 percent of the 1980 total).
- 2,784,000 houses or mobile homes were moved in.
- 565,000 units changed from nonresidential to residential use either through structural alterations, such as a school reconstructed to apartments, or change in use, such as a doctor's office in an apartment building changed to a residential apartment.
- 147,000 units resulted from rehabilitation of units that were vacant and condemned or scheduled to be demolished.
- 559,000 units were "other" additions (includes 267,000 units changed from "group quarters" to housing units, such as college dorm rooms which became apartments.

Approximately 70,725,000 units or about 79 percent of the 1980 inventory consisted of same units. These 70,725,000 same units were approximately 92 percent of the 1973 inventory (table B).

Table B indicates the disposition of the 1973 housing inventory was as follows:

- 411,000 units were lost as the result of the merging of 880,000 1973 units to become 469,000 1980 units (table A).
- 1,808,000 1973 units were lost through demolition or disaster.
- 2,170,000 houses or mobile homes were moved out.
- 523,000 units were lost through change to nonresidential use, both by structural change or change in use.
- 582,000 housing units became vacant and were scheduled for demolition, condemned, severely damaged by disaster, or were no longer protected from the elements.
- 173,000 units were "other" losses (includes 134,000 units lost through change to "group quarters").

Table C shows the net changes in the housing inventory during the 1973–1980 period based on data derived from tables A and B. According to table C, additions during this period from conversion, new construction and all other sources of additions amounted to 17,715,000 units. On the other hand, 5,667,000 units were removed from the inventory during this period as a result of merger, demolition or disaster, and through all other means of loss.

The total numbers of units added and units lost shown in table C includes 14,931,000 "real additions" or approximately 17 percent of the 1980 inventory, and 3,497,000 "real losses" or approximately 5 percent of the total 1973 inventory, as well as 2,784,000 houses or mobile homes moved in and 2,170,000 houses or mobile homes moved out in the 7-year period. "Real additions," which averaged about 2,133,000 per year are housing units in 1980 that were either not built in 1973, or were not housing units in 1973, such as housing units which were created from structures or parts of structures that were for nonresidential use in 1973. "Real losses," which averaged about 500,000 per year were housing units in 1973 but are either nonexistent in 1980, or are not used as housing units in 1980. Examples include demolitions or units changed to nonresidential use. CINCH classifies houses or mobile homes that were built in 1973 or earlier and were moved to their 1980 site since 1973 as additions to the inventory, and houses or mobile homes moved from their 1973 site as losses from the inventory. However, such housing "in transit" are neither "real additions" nor "real losses" because in the great majority of cases they are housing units in both 1973

and 1980 but at different locations. Of all additions occurring between 1973 and 1980, approximately 16 percent consisted of units being moved to a new site. Of all losses occurring between 1973 and 1980, about 38 percent consisted of units being moved from their 1973 site.

Table C shows about 600,000 more houses or mobile homes moved in than moved out. This is because about 500,000 houses or mobile homes built between 1970 and 1973 were moved to their present site after 1973 and were first time placements. These were either in storage or on dealers lots in 1973 and, therefore, were not counted in the housing inventory in that year. The remaining difference of about 100,000 is due to survey procedures and sampling error. Only houses or mobile homes built after 1973 and moved to their present site are considered new construction.

CINCH shows a net gain of 541,000 units through conversion to more (table A or C) and a net loss of 411,000 units through merger to fewer (table B or C) for the 7-year period. If the net gain of 541,000 units through conversion is balanced against the net loss of 411,000 units through merger, the resulting difference of 130,000 (541,000 minus 411,000) units represents the overall net addition of units resulting from conversions to more over units lost through mergers to fewer.

The South Region had the highest rate of units moved to site as well as the highest rate of units moved from site, approximately 50 percent of all such additions and losses for the Nation. The South and West Regions showed the highest overall rates of growth in the Nation with net increases of approximately 21 and 23 percent, respectively. While the West had only 19 percent of the total housing inventory in 1980, it had 25 percent of the new construction in the Nation. The Northeast Region showed a smaller rate of increase (approximately 8 percent) than the South or West Regions. With approximately 22 percent of the Nation's housing in 1980, the Northeast only had 11 percent of the Nation's new construction. Nevertheless, even with this low rate of new construction, the Northeast had a large share of increase due to conversions to more units and "other" additions, approximately 36 percent of each of these types of additions for the Nation. While the North Central Region had an overall rate of growth of approximately 11 percent, the rate of change "in central cities" of this region was very small.

The definitions of standard metropolitan statistical areas (SMSA's) used in the 1980 CINCH survey correspond to the 243 SMSA's defined in the 1970 census. Examination of the distribution of components inside and outside of these 1970 SMSA's shows that a disproportionate number of "real losses" from the housing inventory for the United States occurred in the central city portions of SMSA's. For example, while approximately 32 percent of the 1973 inventory was located "in central cities," 39 percent of all demolition and disaster losses, 59 percent of all units lost through merger to fewer, and 49 percent of all "other" losses occurred "in central cities." The units that were lost "in central cities" were replaced by additions but the net effect of these additions was small. While 29 percent of the 1980 inventory was located "in central cities," only 20 percent of "real additions" occurred there as did 16 percent of all new construction for the Nation. Most of the additions to the housing inventory occurred either in the "not in central cities" portion of SMSA's or "outside SMSA's." For example, while a total of 71 percent of the 1980 inventory was located "not in central cities" and "outside SMSA's," 81 percent of "real additions" occurred in these two areas, as did 84 percent of all new construction for the Nation.

Table D shows the sources of the 1980 housing inventory for housing units with a White householder, a Black householder, or a householder of Spanish origin in 1980. One finding shown in Table D is that both White householders or householders of Spanish origin are more likely to live in new construction units than are Black householders. About 15 percent of housing units with a White householder in 1980 are new construction as was 11 percent of housing units with a householder of Spanish origin in 1980. Approximately 7 percent of housing units with a Black householder were built after 1973. Black householders are more likely to live in same units (87 percent of the 1980 inventory with a Black householder) than are White householders (80 percent of the 1980 inventory with a White householder) or householders of Spanish origin (83 percent of the 1980 inventory with a householder of Spanish origin).

Table E shows the disposition of the 1973 housing inventory for housing units with a White householder, a Black householder, or a householder of Spanish origin in 1973. One finding is that housing units with a Black householder were about twice as likely to be lost from the 1973 inventory as were housing units with a White householder (10 percent compared to 5 percent). Housing units with a Black householder in 1973 were much more likely to be lost through demolition or disaster than were housing units with a White householder in 1973. Approximately 6 percent of the 1973 inventory with a Black householder were lost through these means compared to about 2 percent of the 1973 inventory with a White householder. Also, housing units with a Black householder or a householder of Spanish origin in 1973 were more likely to be lost from the inventory, because they became vacant and were condemned, damaged or exposed to the elements since 1973, than were housing units with a White householder. Less than 1 percent of the 1973 inventory with a White householder were lost through these means as compared to about 2 percent of units with a Black householder or a householder of Spanish origin in 1973.

In tables D, E, and F data for housing units with a Black householder or householder of Spanish origin, CINCH shows a greater number of 1980 units resulting from mergers than 1973 units entering into mergers, resulting in a negative net loss in three instances. This occurs because CINCH, by its design measures changes to the units, regardless of the characteristics of the occupants. In fact, units involved in mergers are frequently vacant. Therefore counts showing a negative net loss or very little loss when tabulated for a particular population subgroup, merely indicate that the subgroup did not occupy those units in 1973. For example, when four units merge to two, the overall net loss is two. But if only two were occupied by Black householders in 1973, and the two resulting units were occupied by Black householders as well, the net loss would be zero.

Table A. **Source of the 1980 Housing Inventory**

Appendix A.—Area Classifications

REGIONS

In this report, data are provided for each of the four major census regions; Northeast, North Central, South, and West. For a detailed description of the geographic area included in each region refer to the map on page XIII of this report.

STANDARD METROPOLITAN STATISTICAL AREAS

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The standard metropolitan statistical area (SMSA) classification is a statistical standard, developed for use by Federal agencies in the production, analysis, and publication of data on metropolitan areas. The SMSA's are designated and defined by the Office of Management and Budget, following a set of official published standards developed by the interagency Federal Committee on Standard Metropolitan Statistical Areas.

The definitions of standard metropolitan statistical areas used in the Components of Inventory Change Survey (CINCH) correspond to the 243 SMSA's defined in the 1970 census. These include the 228 SMSA's defined and named in the Bureau of the Budget publication, *Standard Metropolitan Statistical Areas: 1967,* U.S. Government Printing Office, Washington, D.C. 20402. After 1967, 15 SMSA's were added, of which 2 were defined in January 1968, and the remaining 13 defined in February 1971 as a result of the 1970 census. Changes in SMSA definition criteria, boundaries, and titles made after February 1971 are not reflected in this series of reports.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. (For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited in this section.)

The housing units in SMSA's may also be referred to as the metropolitan housing. This housing in SMSA's is subdivided into "in central cities" and "not in central cities." In this report, figures for "in central cities" refer to all housing units within the legal city boundaries as defined in 1971. For a few central cities, the figures include some housing units in parts of the city classified as rural in the 1970 census. The housing units outside SMSA's constitute the nonmetropolitan housing.

GENERAL

The 1980 Components of Inventory Change (CINCH) Survey was conducted by personal interview. The CINCH sample was comprised of the basic AHS sample plus those units involved in a conversion or merger which were not in the AHS sample because of current survey sampling procedures. A small supplemental sample of units derived from nonresidential space was also included. The survey interviewers determined the component for each sample unit in the 1973 and 1980 inventories by comparing the address listed in 1973 with its 1980 status. During the comparison process, the interviewer also determined the components for sample units that had been removed from the housing inventory since 1973, and those added to the inventory since 1973. Interviewers also obtained characteristics for each of the existing units.

Comparability With 1973 Through 1980 Annual Housing Surveys—Most of the concepts used in the 1980 CINCH survey report are essentially the same as those used in the 1973 through 1980 Annual

Housing Surveys (AHS) National sample. The 1980 CINCH questionnaire was composed of core data items from the National AHS and four supplemental items, most of which match back to the 1973 data set.

A substantive difference between the 1980 CINCH survey and the AHS exists in the treatment of vacant mobile homes. Vacant mobile homes are counted as housing units in the 1980 census and in CINCH, but they are not counted as housing units in AHS. Therefore, the resulting totals in the CINCH survey are somewhat higher than AHS. Differences will also occur in the estimate of losses and additions derived from the two surveys, because CINCH considers vacant mobile homes as part of the inventory while AHS does not. For example, if a mobile home was occupied in 1973 but vacant in 1980, AHS would consider this an inventory loss, but CINCH would not. Conversely, if the unit was vacant in 1973 and occupied in 1980, it would be an addition in AHS but not in CINCH. On the other hand, if a mobile home was vacant in 1973 and was subsequently removed from the inventory, this would not be considered as a loss in AHS, but would be in CINCH. Also, in AHS, conversions to more units and mergers to fewer units are treated respectively as additions to the inventory and losses from the inventory, but they are not identified as specific components. In CINCH, conversions to more units and mergers to fewer units are also additions to or losses from the inventory but they are identified as specific components. (For a more detailed discussion of conversions and mergers, see the section titled "Components of Change" in this appendix.) Any other substantive differences between the AHS and CINCH surveys are discussed under the particular subject later in this appendix. Extreme care should be exercised when making comparisons between data from the CINCH survey and the AHS because of these and other procedural differences. (For a further discussion of survey differences, see Appendix D, "Accuracy of the Data.")

Comparability With 1980 Census of Housing Data—Many of the concepts and definitions are the same for items that appear in both the 1980 census and the 1980 CINCH survey. There is a difference, however, in the housing unit definition. In the 1980 CINCH, a housing unit is defined as separate living quarters with either direct access or complete kitchen facilities. For the 1980 census, the complete kitchen facilities alternative was dropped and direct access was required of all units.

There are several other differences between the 1980 census and the 1980 CINCH. In the 1980 CINCH, living quarters containing five or more persons, not related to the householder, are classified as group quarters. In the 1980 census, the requirement has been raised to nine or more persons not related to the householder. The number of units with six to nine unrelated persons is not assumed to be very large.

Owner-occupied and vacant-for-sale cooperatives were identified in the 1980 CINCH. These units were not identified separately in the 1980 census, but were included in the overall count of owner-occupied units. The 1980 census does provide data on vacant-for-rent and renter-occupied condominium units, CINCH does not. Additionally, in the 1980 CINCH, complete plumbing facilities and telephone need only be located in the structure containing the housing unit. In the 1980 census, these items must be inside the specific housing unit. Other definitional differences are discussed under the particular subject.

Additional differences between the 1980 CINCH data and 1980 census data may be attributed to several factors. These include the extensive use of self enumeration in the census in contrast to personal interview for CINCH; differences in processing procedures; the estimation procedures and sample designs; the sampling variability of the estimates from CINCH; to a smaller extent, the sampling variability associated with the sample data from the census; the nonsampling errors associated with CINCH estimates; and the nonsampling errors associated with the census data.

Comparability With 1970 and 1980 Censuses of Population Data—In the 1970 and 1980 censuses, data for years of school completed were based on responses to two questions—the highest grade or year of regular school each household member attended, and whether or not that grade or year was completed. In the 1980 CINCH survey, data for years of school completed were based on responses to a single question—the highest grade or year of regular school completed by the householder. Therefore, the 1980 CINCH survey may overstate the education level of the householder, that is, respondents may have reported the grade or year in which the householder was currently enrolled or had last been enrolled whether or not the grade or year was completed.

Other definitional differences are discussed under the particular subject.

Comparability With 1970 Components of Inventory Change Survey—The 1970 Components of Inventory Change Survey was conducted in 1970 as part of the 1970 Census of Housing. It measured the components of change between 1960 and 1970, a ten year period. The 1980 CINCH survey covers the seven year period, 1973 to 1980 because of its close association with the Annual Housing Survey, which began in 1973. The 1980 and 1970 programs used essentially the same concepts, except that the 1980 CINCH does not contain data for recent movers, whereas the 1970 CINCH survey did. Data for recent movers can be found in the Annual Housing Survey, Part D, *Housing Characteristics for Recent Movers for the United States and Regions.*

Care should be taken in comparing the statistics from the 1980 survey with similar data from the 1970 survey. While one must recognize that the 1970 CINCH survey measured components of change for a ten-year period, and that the 1980 CINCH survey measured components of change for a seven-year period, the 1973-1980 estimate cannot simply be increased to account for the missing three years, because components are not additive. Estimates of sampling variability and differences in procedures for collecting, editing, and tabulating the data could affect the relationship between the results of the two surveys.

Comparability With the 1956 National Housing Inventory and the 1960 Components of Change Survey—The 1956 National Housing Inventory and the 1960 Components of Change Survey used essentially the same concepts as the 1970 and 1980 CINCH surveys. However, the reporting unit was defined as the "housing unit" in 1980, whereas the reporting unit was defined as the "dwelling unit"

in the 1956 and 1960 surveys. Caution should be used when comparing statistics from the 1980 survey with data from the 1956 or 1960 surveys for the same reasons stated earlier in the section "Comparability with the 1970 Components of Inventory Change Survey."

Comparability With Other Current Reports—This report series contains information similar to those contained in some of the other current Census Bureau reports such as the Current Housing Reports, the Current Population Reports, and the Current Construction Reports, published by the Bureau of the Census. Because of procedural differences such as the treatment of vacant mobile homes (see the section "Comparability with the 1973 through 1980 Annual Housing Surveys"), care should be taken when comparing data from the CINCH survey with data from other current surveys.

LIVING QUARTERS

Living quarters are classified in CINCH as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, or boarding house). However, living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a night guard lives). Mobile homes or trailers, boats, tents, caves, vans, etc., may also be used as living quarters.

Housing Units—For this report series a housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from other persons in the building and which have either (1) direct access from the outside of the building or through a common hall which is used or intended to be used by the occupants of another unit or by the general public or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters). For vacant units, the criteria of separateness, direct access, and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that tents, caves, boats, railroad cars, and the like, are included only if they are occupied as someone's usual place of residence. Vacant mobile homes are included, provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers sales lots, at the factory, or in storage are excluded from the housing inventory.

Group Quarters—Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, and convents. A house or apartment is considered a group quarters only if it is shared by the person in charge and five or more nonrelatives, or, if there is no person in charge, by six or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

Rules for Hotels, Rooming Houses, Etc.—Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by either (1) permanent residents; i.e., persons who consider the hotel as their usual place of residence, or (2) persons who have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only if located in hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied or intended for occupancy by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have either direct access or complete kitchen facilities for exclusive use, their quarters are classified as separate housing units. The remaining quarters are classified as group quarters. In a dormitory, residence hall, institution or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

Year-Round Housing Units—Data on housing characteristics in the 1980 CINCH reports are limited to year-round housing units; i.e., all occupied units plus vacant units which are intended for year-round use. Vacant units intended for seasonal occupancy and vacant units held for migratory labor are excluded because of the difficulty of obtaining reliable data on their characteristics. Counts of the total housing inventory, however, are given for each area presented in this report.

COMPONENTS OF CHANGE

The housing inventory has been divided into components to reflect units that remain the same as well as the several kinds of changes that occur. The term "Components of change" refers to these individual parts, which are designed to explain (1) the source of the 1980 housing inventory, and (2) the disposition of the 1973 housing inventory. In terms of the 1980 inventory, the components of change consist of: same units, units added through new construction, units added through other sources, units changed by conversion, and units changed by merger. In terms of the 1973 inventory, the components of change consist of: same units, units lost through demolition or disaster, units lost through other means, units changed by conversion, and units changed by merger.

In general, the above classifications were obtained by interviewers making comparisons between units as listed in 1973 and units as listed in 1980, and by a more detailed computer comparison of housing unit status and characteristics. Through the procedures used in this survey, it was possible to classify the components of change on the basis of the situation reported in 1973 and the situation existing in 1980.

Same Units—Same units are living quarters which existed in 1973 and remained unchanged in number in 1980. Thus, same units are common to both the 1973 and 1980 inventories. Units that were changed after 1973 but by 1980 had changed back to the 1973 status are also

considered same units. For example, a 1973 housing unit that was converted into several units and later merged to one unit, or a housing unit that was changed to nonresidential use and later was restored to residential use are classified as same units. Changes made since 1973 in the characteristics of a housing unit, such as an added bedroom, do not affect its classification as same if it is still one housing unit in 1980.

Mobile homes and trailers are shown as a separate category. When one or more permanent rooms have been added to a mobile home or trailer, it is classified as a "1-unit detached" structure. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer. Mobile homes by definition contain only one housing unit. For CINCH, if the addition of one or more permanent rooms were made after 1973 to a mobile home or trailer which existed in 1973 and it is still one unit in 1980, the component classification for this unit would be "Same" and the 1980 units-in-structure classification would be "1-unit detached." For this reason, while the counts in 1973 and 1980 for same units will be identical, the subclassification of "mobile home or trailer," and "1-unit detached" will change. (See the section, "Units in Structure," in this appendix.)

Units Changed By Conversion—Conversion refers to the creation of two or more 1980 housing units from fewer 1973 units through structural alteration or change in use. Structural alteration includes such changes as adding a separate room or building walls to form another housing unit. Change in use is a simple rearrangement in the utilization of space without structural alteration, such as locking a door which closes off one or more rooms to form a separate housing unit. The term "Changed by conversion" is applicable to both the 1973 and 1980 inventories. For example, one housing unit in the 1973 inventory which was subsequently converted to three housing units was counted as one unit changed by conversion for the 1973 statistics and as three units as changed by conversion for the 1980 statistics. Subtraction of the 1973 figure from the 1980 figure yields the net number of housing units added as a result of conversion. The number of conversions does not include units that had been converted at some point between 1973 and 1980 but had returned to the 1973 status before the 1980 enumeration.

Units Changed By Merger—A merger is the result of combining two or more 1973 housing units into fewer 1980 units through structural alteration or change in use. Structural alteration includes such changes as the removal of walls or dismantling of kitchen facilities. Change in use may result from a simple rearrangement of space without structural alteration, such as unlocking a door which formerly separated two housing units. A change in use also occurs, for example, when a family occupies both floors of a house which had formerly contained a separate housing unit on each floor.

The term "Changed by merger" is applicable to both the 1973 and 1980 inventories. For example, two housing units in the 1973 inventory which subsequently were merged into one housing unit were counted as two units changed by merger for the 1973 statistics, and as one unit changed by merger for the 1980 statistics. Subtraction of the 1980 figure from the 1973 figure yields the net number of housing units lost as a result of merger. As with conversions, units that had merged after 1973 but had returned to their 1973 status before 1980 are not included in the figures on mergers.

Units Added Through New Construction—Any housing unit built in 1974 or later is classified as a unit added by "New construction." This includes occupied and vacant trailers and mobile homes, if the model year is 1974 or later. Housing units built during that period but removed from the housing inventory before October 1980 are not reflected in the new construction figures in this report. Housing units built during the period but subsequently changed by conversion or merger are classified as new construction in terms of the number of units existing at the time of the 1980 CINCH survey. Vacant units under construction at the time of interviewing were interviewed only if construction had proceeded to a point that all exterior windows and doors were installed and usable floors were in place. In the Annual Housing Survey and the Components of Inventory Change Survey, data on new construction were obtained primarily from a sample of units selected from building permits.

Units Added Through Other Sources—Any housing unit added to the inventory through sources other than new construction or conversion is classified as a unit "Added through other sources." This component includes the following types of added units:

- Units created from living quarters previously classified as group quarters.
- Units created from nonresidential space such as a store, garage, or barn.
- Units that were previously severely damaged by fire, condemned, or to be demolished.
- Houses or mobile homes moved to site since October 1973. Nationally, units "moved in" do not result in a net addition to the total inventory since they also represent units lost from the place from which they were moved. Mobile homes built after 1973 and moved to their present site are considered new construction.

Units Lost Through Demolition Or Disaster—A housing unit which existed in October 1973 and was subsequently torn down is classified as a unit "Lost through demolition." Units destroyed by fire, flood, or other natural causes are classified as units lost through disaster. In the 1970 CINCH units lost through disaster were counted as units lost through "other means" (see below).

Units Lost Through Other Means—Any housing unit which existed in October 1973 is counted as "lost through other means" if it were lost from the housing inventory through means other than demolition or disaster. This component includes the following types of losses:

- Units lost by change to group quarters; for example, a housing unit that was occupied by a family in 1973 and by six boarders at the time of the 1980 survey.
- Units lost from the inventory because they were vacant and either the roof, walls, doors, or windows no longer protected the interior from the elements, or because the unit was severely damage by fire.
- Vacant units lost from the inventory because there was positive evidence (sign, notice, or mark on the house or block) that the units were scheduled for demolition or that they were con-

demned so that further occupancy was prohibited.
- Units lost by change to entirely nonresidential use.
- Houses or mobile homes moved from site since October 1973. For the most part, units "moved out" do not result in a net loss to the total inventory since they also represent units added to a new site.

Units lost through other means do not include units which were lost during the period but restored as housing units by October 1980. For example, losses do not include 1973 housing units that were changed to nonresidential use and back to housing units by October 1980, or 1973 housing units that became vacant and condemned and were rehabilitated by October 1980.

OCCUPANCY AND VACANCY CHARACTERISTICS

Total Persons In Housing Units—In addition to the residents, persons who have no usual residence elsewhere are included in the unit where they were interviewed. Persons living in group quarters are excluded.

Occupied Housing Units—A housing unit is classified as "Occupied" if it is the usual place of residence of at least one of the persons living in it at the time of the interview or if the occupants are only temporarily absent—e.g., away on vacation. If all the persons staying in the unit at the time of the survey had their usual place of residence elsewhere, the unit is classified as "Vacant." A household includes all the persons who occupy the housing unit as their usual place of residence.

Race—The classification of "Race" refers to the race of the householder occupying the housing unit as reported by the survey respondents. (See definition of householder on page B—11.) However, the concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. The race of the householder is reported in three categories: "White," "Black (Negro)," and "Other." The last category includes American Indian, Chinese, Eskimo, Japanese, Korean, and any other race except White and Black. Figures on tenure are given separately for White and Black householders; units with householders of other races are included in the total and may be derived by subtracting the sum of White and Black from the total. More detailed characteristics of units with a White householder and a Black householder are presented in separate tables.

Spanish Origin—The classification "Spanish origin" refers to the origin of the householder occupying the housing unit as reported by the survey respondents. Detailed characteristics of units with a householder of Spanish origin are presented in separate tables. Spanish origin was determined on the basis of a question that asked for self-identification of a person's origin or descent. Respondents were asked to select their origins from a "flash card." Persons of Spanish origin were those who indicated that their origin was either Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish.

Origin or descent can be viewed as the ancestry, nationality group, lineage, or country in which the person or person's parents or ancestors were born before their arrival in the United States. Persons of Spanish origin may be of any race. In this report, households and families are classified by the Spanish origin of the householder.

Care should be exercised in the interpretation of difference in the estimated counts of Spanish-origin householders between the 1980 CINCH survey, the 1970 census, and the 1980 census. In the 1970 census, Spanish persons were identified according to various criteria; birthplace, birthplace of parents, language, surname, and origin or descent. In addition, research indicates that 1970 estimates of Spanish-origin households may be significantly overstated in the South Region and North Central Region. In the 1980 census the categories are essentially the same as the 1980 CINCH, except the category "Central or South American" was deleted in the 1980 census.

Tenure—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "Renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Cooperatives and Condominiums—A "cooperative" is a type of ownership whereby a group of housing units is owned by a corporation of member-owners. Each individual member is entitled to occupy an individual housing unit and is a shareholder in the corporation which owns the property.

A "condominium" is a type of ownership that enables a person to own an apartment or house in a development of similarly owned units. The owner has the deed and very likely the mortgage on the unit occupied. The owner may also hold common or joint ownership in some or all common areas such as grounds, hallways, entrance, elevators, etc.

Cooperative or condominium ownership may apply to various types of structures including detached houses, rowhouses, townhouses, etc., as well as apartment buildings.

Year Householder Moved Into Unit—Data presented for this item are based on the information reported for the householder and refer to the year of the latest move. If the householder moved back into a unit the person previously occupied, the year of the latest move was recorded. If the householder moved from one apartment to another in the same building, the year the householder moved into the present apartment was recorded. The intent is to establish the year the present occupancy by the householder began. The year the householder moved is not necessarily the same year other members of the household moved, although in the majority of cases, the entire household moved at the same time.

In 1973, data on year moved into the unit were collected for the head of household. (For an explanation of the differences between the concepts, "head" and "householder" see the definition of householder on page B—11.)

Vacant Housing Units—A housing unit is "vacant" if no one is living in it at the time of the interview, unless its occupants are only temporarily absent. Units temporarily occupied, at the time of the interview, entirely by persons who have a usual residence elsewhere are also classified as "Vacant." Interviewers classified new units

not yet occupied as vacant housing units if construction had reached a point where all exterior windows and doors were installed and usable floors were in place. Vacant units are excluded if they were exposed to the elements; i.e., the roof, walls, windows, or doors no longer protected the interior from the elements; if the unit was severely damaged by fire; or if there was positive evidence (such as a sign on the house or block) that the unit was to be demolished or was condemned. Also excluded are quarters which were being used entirely for nonresidential purposes, such as a store or an office, or quarters which were used for the storage of business supplies or inventory, machinery, or agricultural products.

The concepts and definitions of vacancy status used in this report are the same as those used in the 1970 and 1980 Census of Housing reports.

Type of Vacant Units—Vacant housing units are classified in this report as either "Seasonal and migratory" or "Year-round." "Seasonal" units are intended for occupancy during only certain seasons of the year. Included are units intended for recreational use, such as beach cottages and hunting cabins; units offered to vacationers in the summer for summer sports or in the winter for winter sports; and vacant units held for herders and loggers. "Migratory" units are vacant units held for occupancy by migratory labor employed in farm work during the crop season. "Year-round" vacant housing units are available or intended for occupancy at any time of the year. A unit in a resort area which is usually occupied on a year-round basis is considered as year-round. A unit used only occasionally throughout the year is also considered as year-round.

Vacancy Status—Year-round vacant units are subdivided according to their vacancy status as follows:

For sale only. Vacant year-round units being offered for sale only, including individual units in cooperatives and condominium projects if the individual units are offered for sale only.

For rent. Vacant year-round units offered for rent, and vacant units offered either for rent or for sale.

Held for occasional use. This category consists of vacant year-round units which are held for weekend or other occasional use throughout the year. Shared ownership or time-sharing condominiums are also classified as "held for occasional use." Homes reserved by their owners as second homes usually fall into this category, although some second homes may be classified as "seasonal."

Other Vacant. This category includes all vacant year-round units which do not fall into any of the classifications specified above. For example, this category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, units held for personal reasons of the owner, as well as units rented or sold, awaiting occupancy.

Characteristics of vacant housing are limited to year-round vacant units. Vacant units intended for seasonal occupancy and vacant units held for migratory labor are excluded because it was difficult to obtain reliable information for them. However, counts of seasonal units are given in this report.

Homeowner Vacancy Rate—The 1980 "homeowner vacancy rate" is the number of year-round vacant units for sale as a percent of the total homeowner inventory; i.e., all owner-occupied units and year-round vacant units for sale or sold, but not occupied. The homeowner vacancy rate for 1970 excluded vacant units sold but not occupied.

Rental Vacancy Rate—The 1980 "rental vacancy rate" is the number of year-round vacant units for rent as a percent of the total rental inventory; i.e., all renter-occupied units and all year-round vacant units for rent or rented, but not occupied. The rental vacancy rate for 1970 excluded vacant units rented but not occupied.

Housing Units Boarded Up—Statistics for this item are only provided for vacant housing units. "Boarded up" refers to the covering of windows and doors by wood, metal, or similar materials to prevent entry into the housing unit. A 1-unit structure or a given housing unit in a multi-unit structure may be boarded up. This item was collected by interviewer observation.

UTILIZATION CHARACTERISTICS

Persons—All persons occupying the housing unit who have no usual residence elsewhere are included. These persons include not only occupants related to the householder but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the householder. In 1973, the concept "head of household" was used rather than "householder." (See definition of "householder" on page B—11.) The data on "persons" show categories of the number of one-person through seven-or-more person households.

A person was counted at his/her usual place of residence. The usual place of residence is the place where the person lives or sleeps most of the time. This place is not necessarily the same as a legal residence, voting residence, or place the person considers "home."

Rooms—The statistics on "rooms" are in terms of the number of housing units with a specified number of rooms. Rooms counted include whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attics or finished basement rooms, recreation rooms, permanently enclosed porches that are suitable for year-round use, and lodger's rooms. Also included are rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets.

Not included in the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by persons not living in the unit.

If a room was used by occupants of more than one unit, the room is included with the unit from which it was most easily reached.

Persons Per Room—"Persons per room" is computed for each occupied housing unit

by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

Bedrooms—The number of "bedrooms" in a housing unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping, such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a sofa bed are not considered bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment is classified by definition as having no bedroom.

STRUCTURAL CHARACTERISTICS

Conventional Housing Units—Housing units not defined as mobile homes or trailers by this survey are classified as conventional.

Kitchen Facilities—A unit has "complete kitchen facilities" when it has all three of the following for the exclusive use of the occupants of the unit: (1) an installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An icebox is not included as a mechanical refrigerator.

The kitchen facilities are for the exclusive use of the occupants when they were used only by the occupants of one housing unit, including lodgers or other unrelated persons living in the unit. When a structure consists of only one housing unit, all equipment located inside the structure is classified, by definition, "for exclusive use." The 1980 census did not determine whether kitchen equipment was for exclusive use. For vacant units from which one or all of the kitchen facilities had been removed, the kitchen facilities used by the last occupant were to be reported.

Year Structure Built—"Year structure built" refers to when the building was first constructed, not when it was remodeled, added to, or converted. For houseboats or mobile homes and trailers, the manufacture's model year is assumed to be the year the structure was built. The figures shown in this report refer to the number of units in structures built during the specified periods and in existence at the time of the interview. Statistics are based on the respondent's estimate and are, therefore, subject to the respondent's ability to properly classify the year built for the building.

Units In Structure—A structure is a separate building that has either open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. In the determination of the number of housing units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented for the number of housing units in structures of specified type and size, not for the number of residential buildings. Structures containing only one housing unit are further classified as detached or attached.

A 1-unit structure is "detached" if it has open space on all sides even though it may have an adjoining shed or garage. A 1-unit structure is "attached" if it has one or more walls extending from ground to roof which divide it from other adjoining structures such as row houses, townhouses, etc.

"Mobile homes and trailers" are shown as a separate category. When one or more permanent rooms have been added to a mobile home or trailer, it is classified as a 1-unit detached structure. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer. Mobile homes by definition contain only one housing unit. (For a discussion of how the addition of one or more permanent rooms will affect the units in structure subclassification of same units, see the section, "Same Units," in this appendix.)

Garage Or Carport On Property—The garage or carport must have been currently available for use by the occupants of the housing unit; i.e., members of the household could use it for parking even if it was being used as a storage area for items such as lawn equipment or furniture. It may be attached to the house or it may be completely unattached, but it must be on the property. Excluded are garages or carports that had been converted to other uses such as living quarters, an area used for business purposes, an area rented to someone else, or for some reason could not be used for parking.

Elevator In Structure—Statistics on "elevator in structure" are for the number of housing units in structures with four stories or more. The 1980 census counts a finished basement as a story, CINCH does not.

Abandoned Or Boarded-Up Buildings On Same Street—Statistics on abandoned or boarded-up buildings on the same street are based on the interviewer's observation from the main entrance of the building in which the sample unit is located. Buildings are classified as "Abandoned or boarded up" if they are permanently vacant and show severe signs of neglect, have most of their visible windows broken or missing, or have their windows and doors covered by wood, metal, or some other similar material to prevent entry.

PLUMBING CHARACTERISTICS

Plumbing Facilities—The category "With all plumbing facilities" consists of housing units which have hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the housing unit. All plumbing facilities must be located in the structure but they need not be in the same room. "Lacking some or all plumbing facilities" means that not all three specified plumbing facilities (hot and cold piped water, flush toilet, and bathtub or shower) are present inside the structure, or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

Bathrooms—A "complete bathroom" is a room with a flush toilet, bathtub or shower, and a wash basin with piped hot and cold water for the exclusive use of the occupants of the housing unit. A "half bathroom" has at least a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

The category "Also used by another household" consists of units with bath-

room facilities which are also for the use of the occupants of other housing units. The category "None" consists of units with no bathroom facilities, units with only a half bathroom, and units with all bathroom facilities but not in one room.

Source of Water—Housing units may receive their water supply from a number of sources. A common source supplying water to six or more units is classified as a "Public system or private company." The water may be supplied by a city, county, water district, water company, etc., or it may be obtained from a well which supplies water to six or more housing units. If the water is supplied from a well serving five or fewer housing units, the units are classified as having water supplied by an "individual well." The category, "Some other source," includes water obtained from springs, creeks, rivers, lakes, cisterns, etc.

Sewage Disposal—Housing units are either connected to a public sewer, to a septic tank or cesspool, or they dispose of sewage by other means. A public sewer may be operated by a government body or by a private organization. Small sewage treatment plants, which in some localities are called neighborhood septic tanks, are also classified as "Public sewers." A housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal. The category, "Other means," includes housing units which dispose of sewage in some other way.

EQUIPMENT AND FUELS

Telephone Available—A housing unit is classified as having a telephone if there is one available to the occupants of the unit for receiving calls. The telephone may be located outside or inside the housing unit, and one telephone may serve the occupants of several units. In the 1980 census the telephone must be located in the housing unit. The number of housing units with a telephone available, therefore, does not indicate the number of telephones installed in homes.

Heating Equipment—There are a number of different types of heating equipment. "Warm-air furnace" refers to a central system which provides warm air through ducts leading to various rooms. "Heat pump" refers to an electric all-in-one heating-cooling system which utilizes indoor and outdoor coils, a refrigerant, and a compressor to provide heating in the winter and cooling in the summer. Only heat pumps that are centrally installed with ducts to the rooms are included in this category. "Steam or hot water" refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. "Built-in electric units" are permanently installed in floors, walls, ceilings, or baseboards. A "floor, wall, or pipeless furnace" delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed.

"Room heaters with flue" include circulating heaters, convectors, radiant gas heaters, and other nonportable heaters that burn gas, oil or kerosene or other liquid fuel, and connect to a flue, vent, or chimney to remove smoke and fumes. "Room heaters without flue" include any room heater (not portable) that burns gas, oil, kerosene, or other liquid fuel and does not connect to a flue, vent, or chimney. "Fireplaces, stoves, or portable heaters" include room heaters that burn coal, coke, charcoal, wood or other solids. It also includes portable room heaters that burn kerosene, gasoline, fuel oil, or other liquid fuel, as well as portable electric heaters that get current from an electrical wall outlet.

For vacant units from which the heating equipment had been removed, the equipment used by the previous occupants was to be reported.

Air-Conditioning—"Air-conditioning" is defined as the cooling of air by a refrigeration unit. It does not include evaporative coolers, fans, or blowers which are not connected to a refrigeration unit; however, it does include heat pumps. A "central system" is an installation which air-conditions a number of rooms. In an apartment building, a central system may cool all apartments in the building; each apartment may have its own central system; or there may be several systems, each providing central air-conditioning to a group of apartments. A central installation with individual room controls is a central air-conditioning system. A "room unit" is an individual air-conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room.

Fuels Used for House Heating, Water Heating, and Cooking—"Utility gas" is gas piped through underground pipes from a central system to serve the neighborhood. "Bottled, tank, or LP gas" is stored in tanks which are refilled or exchanged when empty. "Kerosene, etc." includes kerosene, gasoline, alcohol, or other combustible liquids. "Other fuel" includes any other fuel such as purchased steam, solar heat (water heating only), coal dust briquettes made of pitch and sawdust, waste materials such as corncobs, etc.

Automobiles and Trucks Available—Data for this item refer to the number of housing units with vehicles available at home for the use of the members of the household. Included in this item are passenger cars, station wagons, pickup trucks, small panel trucks of 1-ton capacity or less, as well as company cars, and taxicabs kept at home for use of household members. Cars rented or leased for 1 month or more, and company vans and trucks of 1-ton capacity or less are also included if kept at home and used for nonbusiness purposes. Dismantled or dilapidated cars; immobile cars used as a source of power for some piece of machinery; vans and trucks kept at home but used only for business purposes; and police and government cars kept at home are excluded. The statistics do not reflect the number of vehicles privately owned or the number of households owning vehicles.

FINANCIAL CHARACTERISTICS

Income—The statistics on income in the CINCH survey are based on the respondent's reply to questions on income for the 12 months prior to the interview and are the sums of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, medicare deductions, etc.

In this report, the statistics relate to

the money income of the family or primary individual occupying the housing units; i.e., the sum of the income of the family householder and all other members of the family 15 years old and over, or the income of the primary individual. Incomes of persons living in the unit but not related to the householder are not included in this sum.

Receipts from the following sources were not included as income: Value of income "in-kind," such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on uncashed savings bonds; exchange of money between relatives living in the same household; gifts; and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

Family income does not include amounts received by persons who were members of the family during the income period if these persons no longer resided with the family at the time of the interview. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the entire income period but who were members of the family at the time of the interview. For most families, however, the income reported was received by persons who were members of the family throughout the income period.

There may be significant differences in the income data between the CINCH survey and other Bureau of the Census surveys and censuses. For example, the time period for income data in the CINCH survey refers to the 12 months prior to the interview while other income data generally refer to the calendar year prior to the date of the interview. Additional differences in the income data may be attributed to differences in the sampling variability and nonsampling errors between the CINCH survey and other Bureau surveys and censuses, survey procedures and techniques, and processing procedures.

Value—"Value" is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The statistics on value are shown only for owner-occupied 1-unit structures on less than 10 acres having no commercial establishment or medical or dental office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded from the value tabulations.

Value-Income Ratio—The value-income ratio is computed by dividing the value of the housing unit by the total money income of the family or primary individual. The data are presented for the same owner-occupied units for which value was tabulated (see "Value" for exclusions). The ratio was computed separately for each unit and was rounded to the nearest tenth. In reporting value, respondents were asked to select an appropriate class interval. The midpoints of the value intervals were used in the computation of the value-income ratio, except that a mean of $3,500 was assigned for value less than $5,000 and a mean of $325,000 was assigned for values of $300,000 or more. For income, the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

The 1980 and 1973 income statistics are for the 12 months prior to the date of the interview.

Mortgage—The data are restricted to owner-occupied, 1-unit structures on less than 10 acres having no commercial establishment or medical or dental office on the property. The data exclude owner-occupied cooperative and condominium units. A "mortgage" refers to all forms of debt for which the property is pledged as security for payment of the debt. It includes such debt instruments as deeds of trust, mortgage bonds, and vendor liens. In the first two arrangements, usually a third party, known as the trustee, holds the title to the property until the debt is paid. With a vendor lien, the title is kept by the buyer but the seller (vendor) reserves, in the deed to the buyer, a lien on the property to secure payment of the balance of the purchase price. Also included as a mortgage are contracts to purchase, land contracts, and lease with option to purchase agreements where the title to the property remains with seller until the agreed upon payments have been made by the buyer.

Housing units which are owned free and clear comprise the category "Units with no mortgage." Also included in this category are housing units in which the owner has no mortgage but pays a ground rent; that is, the occupant owns the unit but leases, rents, or pays a fee for the use of the land.

Monthly Mortgage Payment—The data are limited to owner-occupied, 1-unit structures on less than 10 acres having no commercial establishment or medical or dental office on the property. The data present the monthly dollar amount paid for the mortgage, principal and interest only. Real estate taxes and fire and hazard insurance costs are excluded from the data even if they are included in the regular payment to the lender.

Real Estate Taxes Last Year—The data are restricted to owner-occupied, 1-unit structures on less than 10 acres having no commercial establishment or medical or dental office on the property. The data exclude owner-occupied cooperatives, condominiums, mobile homes, and trailers. "Real estate taxes last year" refers to the yearly total amount of all real estate taxes payable on the entire property during the last billing period. It includes State and local real estate taxes. Not included are payments on delinquent taxes due from prior years or payments for special assessments, facilities, or services. When the real estate taxes are included with the mortgage, a separate amount for the taxes is obtained.

Property Insurance—This refers to fire and hazard insurance; that is, policies which protect the unit and its contents against loss due to damage by fire, lightning, wind, hail, explosion, etc. Homeowners' policies are also included, since this type of insurance includes fire and hazard insurance with other types of homeowner protection, such as liability. If the cost of the insurance was included as part of the mortgage payments, a separate amount for the insurance was obtained. The amount of the insurance premium reported was the amount paid for an entire 12-month period even if made in two or more installments. Property insurance is shown only as a component of "selected monthly housing costs" and "selected monthly housing costs as percentage of income." The data are presented separately for owner-occupied, 1-unit structures on less than 10 acres with no

commercial establishment or medical or dental office on the property and for owner-occupied mobile homes and trailers on less than 10 acres. The data exclude owner-occupied cooperative and condominium units.

Selected Monthly Housing Costs—The data are presented separately for owner-occupied, 1-unit structures on less than 10 acres having no commercial establishment or medical or dental office on the property and for owner-occupied mobile homes and trailers on less than 10 acres. The data exclude owner-occupied cooperative and condominium units. Separate distributions are shown by whether or not there is a mortgage or, for mobile homes and trailers, by whether or not there is an installment loan or contract. "Selected monthly housing costs" is the monthly sum of payments for the mortgage, or installment loan or contract, real estate taxes (including taxes on mobile home or trailer site if the site is owned), property insurance, utilities (electricity, gas, water, and sewage disposal), fuel (oil, coal, kerosene, wood, etc.), and garbage and trash collection.

Households with a mortgage or similar debt that failed to report the amount of their payment and/or those households that did not report their real estate taxes are included in the "Not reported" category. Likewise, for mobile homes and trailers, households that had an installment loan or contract but did not report their loan payment and/or their taxes are also included in the "Not reported" category.

Selected Monthly Housing Costs as Percentage of Income—The yearly housing costs (selected monthly housing costs multiplied by 12) are expressed as a percentage of the total income of the family or primary individual. This percentage is presented for the same owner-occupied units for which selected monthly housing costs were tabulated. (For exclusions, see "Selected Monthly Housing Costs.") The percentage was computed separately for each unit and was rounded to the nearest tenth of a percent. For income and selected monthly housing costs, the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category "Not computed."

Households that did not report the amount of mortgage or similar debt and/or real estate taxes were included in the "Not reported" category.

Contract Rent—"Contract rent" is the monthly rent agreed to or contracted for, regardless of whether any furnishings, utilities, or services are included. The statistics on rent are provided for renter-occupied units and exclude 1-unit structures on 10 or more acres. Rent data for mobile homes and trailers are not restricted by acreage. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

Gross Rent—The computed rent, termed "Gross rent," is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water) and fuels (oil, coal, kerosene, wood, etc.) if these items are paid for by the renter (or paid for by someone else, such as a relative, welfare agency, or friend) in addition to rent. Gross rent is intended to eliminate differentials which result from varying practices with respect to the inclusion of utilities and fuel as a part of the contract rental payment. The estimated costs of water and fuels are reported on a yearly basis, but they are converted to monthly figures in the computation process. The statistics on rent are provided for renter-occupied units and exclude 1-unit structures on 10 or more acres. Rent data for mobile homes or trailers are not restricted by acreage. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

Gross Rent In Nonsubsidized Housing—The gross rent for "nonsubsidized housing" excludes units reported as being in public housing projects; as having Federal, State, or local government rent subsidies; and units excluded from the gross rent tabulations. In this report, data on nonsubsidized units are not based on government or local records but on self-identification. The figures are, therefore, subject to the ability of a respondent to properly classify the unit as "Subsidized" or "Nonsubsidized" housing.

Gross Rent as Percentage of Income—The yearly gross rent (monthly gross rent multiplied by 12) is expressed as a percentage of the total income of the family or primary individual. The percentage is presented for the same renter-occupied units for which gross rent is tabulated; thus, the statistics on gross rent as percentage of income reflect the exclusion of certain renter-occupied housing units. For gross rent and income, the dollar amounts are used in the computation. The percentage is computed separately for each unit and is rounded to the nearest whole number. Units for which no cash rent is paid and units occupied by families or primary individuals who report no income or a net loss comprise the category "Not computed."

The 1980 and 1973 income statistics are for the 12 months prior to the date of interview.

Gross Rent In Nonsubsidized Housing as Percentage of Income—This item is computed in the same manner as gross rent as percentage of income, except that rents and incomes for public and subsidized housing units are excluded. Data on nonsubsidized units in this report are not based on government or local records, but on respondent answers to two questions. They are, therefore, subject to the ability of a respondent to properly classify the unit as "Subsidized" or "Nonsubsidized" housing.

Public Housing and Private Subsidized or Nonsubsidized Housing—A housing unit is classified as being in a "Public housing project" if the respondent reports the structure in which the unit is located is owned by a local housing authority or other public agency, such as a housing and redevelopment authority or a housing development agency, and operated as public housing. These organizations may receive subsidies from the Federal or State government but the local agency owns the property. All other housing units are private housing.

Private housing units are further classified by whether the unit is "Subsidized," that is, the respondent reports that they pay a lower rent because a Federal, State, or local government program pays part of the cost of construction, building mortgage, or operating expenses. These programs include (1) the interest subsidy programs of the Department of Housing and Urban Development (HUD) for rental and cooperative housing for moderate-income families, (2) the rent supplement program where part of the rent for low-income families occupying certain

types of rental housing projects is paid by HUD, and (3) the direct loan program of HUD for housing the elderly.

The statistics on public or subsidized housing exclude 1-unit structures on 10 or more acres and renter units occupied without payment of cash rent. The data are based on respondent answers to two questions, not on government or local records. The figures are, therefore, subject to the ability of a respondent to properly classify the unit as "Public" or "Private" and, if private, as "Subsidized" or "Nonsubsidized" housing.

HOUSEHOLD CHARACTERISTICS

Household—A "household" includes all persons who occupy a housing unit and have no usual residence elsewhere. By definition, the count of households is the same as the count of occupied housing units.

Householder—The "householder" is the first household member listed during enumeration, 18 years old or over who is the owner or renter of the sample unit. If no household member occupying the sample unit owns or rents the unit, the householder is the first household member listed during enumeration who is 18 years old or older. In 1973 the concept "head" of household was used and the 1973 data reflect this concept rather than the 1980 concept of "householder." One person in each household was designated as the head, that is the person who was regarded as the head by the respondent. However, if a married woman living with her husband was reported as the head, her husband was considered the head for the purpose of the tabulations.

Household Composition by Age of Householder—Statistics by age of householder are presented separately for two-or-more person households and for one-person households. Households having two or more persons are further subdivided as follows:

Married couple families, no nonrelatives. Each household in this group consists of the householder and spouse, and other persons, if any, all of whom are related to the householder.

Other male householder. This category includes households with male householders who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male householders who are widowed, divorced, or single. Also included are households with male householder, wife present and nonrelatives living with them.

Other female householder. This category includes households with female householders who are married, but with husband absent because of separation or other reason where husband and wife maintain separate residences; and female householders who are widowed, divorced, or single. Also included are households with female householder, husband present and nonrelatives living with them.

Households consisting of only one person are shown separately for male householder and female householder under the category "One-person households."

Family Or Primary Individual—The term "Family" refers to the householder and all other persons living in the same household who are related to the householder by blood, marriage, or adoption. If the householder lives alone or with nonrelatives only, then the householder is considered a "primary individual." Housing units are occupied by either families or primary individuals.

Married couples related to the householder of a family are included in the family and are not considered as separate families. A lodger, servant, or other person unrelated to the householder is considered a member of the household but not of the family.

In the statistics on household composition, families are always included in one of the three major groups of two-or-more person households. Primary individuals with nonrelatives living with them are tabulated as "other male or female householder." Primary individuals living alone are always tabulated as "one-person households."

Subfamily—A "subfamily" is a married couple with or without children, or one parent with one or more single (never married) children under 18 years old, living in a household and related to, but not including, the householder or spouse. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

Age of Householder—The age classification refers to the age reported for the householder as of that person's last birthday.

Persons 65 Years Old and Over—This refers to all persons, including the householder, who are members of the household and are 65 years old and over.

Own Children—Statistics on presence of "own" children of householder are shown in this report. A child is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a householder. Own children of subfamilies are excluded from the total count of own children.

Other Relative of Householder—This category includes all persons related to the householder by blood, marriage, or adoption except wife, husband, or child of householder and members of subfamilies.

Nonrelatives—A nonrelative of the householder is any person in the household who is not related to the householder by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Years of School Completed by Householder—The statistics refer to the highest grade of regular school completed and not to the highest grade attended. For persons still attending school, the highest grade completed is one less than the one in which they are currently enrolled. "Regular school" refers to formal education obtained in graded public, private, or parochial schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full or part time. That is, regular schooling is formal education which may advance a person toward an elementary or high school diploma, or college, university, or professional school degree. Schooling or tutoring in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the "regular school" system. Householders whose highest grade com-

pleted was in a foreign school system or in an ungraded school were instructed to report the approximate equivalent grade (or years) in the regular United States school system. They were not reported as having completed a given grade if they dropped out or failed to pass the last grade attended. Education received in the following types of schools is not counted as regular schooling: vocational schools, trade schools, business schools, and non-credit adult education classes.

Appendix C.—General Enumeration and Processing Procedures

GENERAL C–1
DATA COLLECTION PROCEDURES C–1
PROCESSING PROCEDURES ... C–2

GENERAL

The majority of units in the 1980 Components of Inventory Change (CINCH) Survey consisted of 1980 Annual Housing Survey (AHS) sample units and other units associated with the original 1973 AHS sample. The AHS sample was drawn from units enumerated in the 1970 census and updated to include units constructed since 1970. Units that were constructed after 1973, were moved to site, converted from nonresidential use, or added through other means were also represented, as well as sample units that had been removed from the inventory since 1973 through means such as merger to fewer units, demolition or disaster, or other means. The 1980 AHS sample was expanded for CINCH to obtain more accurate counts and characteristics of conversions and mergers. A special supplemental sample was selected to improve coverage of units that were converted from nonresidential use.

DATA COLLECTION PROCEDURES

Interviewing for the 1980 CINCH survey was carried out in conjunction with interviewing for the 1980 AHS. Interviewers made personal visits to each sample unit and obtained the information from the occupants or, if the unit were vacant, from informed persons (landlords, rental agents, or knowledgeable neighbors). The information recorded by the interviewer reflected the situation at the time of the interview. Interviewing was conducted from August 1980 to December 1980.

Interviewers classified each sample address in the 1980 inventory according to its source or "component," i.e., "conversion," "merger," "new construction," "other addition" or "same." Through the comparison process, the interviewer also made preliminary determinations as to the disposition of each 1973 sample unit and recorded it as a "conversion," "merger," "same," "demolition," or "other loss." (For definitions of components, see Appendix B, "Definitions and Explanations of Subject Characteristics.") The form used by the interviewers to record and compare the 1980 status and the 1973 status of each unit in the survey, as well as to list the units that were added to the inventory after 1973 was the D-1701, "CINCH Record of Components." (For a facsimile of this form, see Appendix E, "Facsimiles of Interviewer Forms and Questionnaire Pages.")

After the component information was determined and entered on the D-1701, interviewers conducted an AHS interview at units designated for the AHS sample or a CINCH interview at units that were not designated for the 1980 AHS sample, but for which housing characteristics were required. For example, all units resulting from a conversion to more units may not have been designated for the 1980 AHS sample. The 1980 CINCH questionnaire [AHS-2(CINCH)] contains only the items found in the 1980 AHS questionnaire (AHS-2) which were required for the 1980 CINCH program. (For a facsimile of the AHS-2(CINCH) questionnaire, see Appendix E, "Facsimiles of Interviewer Forms and Questionnaire Pages.") In either type of interview, interviewers transcribed the component information from the D-1701 to a transcription page on the back of the AHS or CINCH questionnaires. It was from this transcription page the CINCH components information was keyed and processed.

As was noted earlier, a special supplemental sample was selected to improve coverage of units that were converted from nonresidential use. Form D-1702, "CINCH Record of Nonresidential Changes" was used to discover housing units that existed in 1980 in structures which contained no housing units at the time of the 1970 census in address-type enumeration districts, and therefore had no chance of being selected for the regular AHS sample. (For a facsimile, see Appendix E.) To accomplish this, the listing done for the retired Commercial Victimization Survey (CVS) National Sample was utilized. These listings consisted of commercial addresses in approximately 2,500 segments. Form D-1702 was used in these segments to determine whether there were currently living quarters in the structure, and if so whether the structure was built before or after April 1, 1970, and, if it existed in 1970, whether there were living quarters in the structure on April 1, 1970. If it was discovered that a structure which existed on April 1, 1970 contained living quarters at the time of the CINCH enumeration but did not on April 1, 1970, these living quarters were interviewed using the AHS-2(CINCH) questionnaire. This supplemental enumeration was carried out in January and February of 1981.

Data were collected for a sample of housing units located in the counties and independent cities which comprise the 461 sample areas used in Census Bureau current surveys for the decade of the 1970's. A small number of additional sample areas were added to improve coverage of units derived from nonresidential use.

(A more detailed description of the survey design and sampling can be found in Appendix D, "Accuracy of the Data." Facsimiles of the forms and questionnaires used in the CINCH survey can be found in Appendix E, "Facsimiles of

Interviewer Forms and Questionnaire Pages.")

PROCESSING PROCEDURES

The questionnaires used for the 1980 CINCH survey were forms on which the interviewer recorded the information by marking a precoded check box or by writing in the entries. Census Bureau clerks edited and coded the questionnaires. The information from the questionnaires was keyed directly onto magnetic tape which was then processed on the Census Bureau's computers through a number of editing and tabulating steps. These editing and tabulating steps included a number of questionnaire edits to ensure that all necessary items were marked and that skip patterns were followed correctly. These edits were followed by a CINCH preedit, the primary function of which was to make certain that the interviewers correctly classified the CINCH components and correctly filled all items on the questionnaires pertaining to the component classification. The CINCH preedit was followed by a computer matching procedure in which the 1980 CINCH computer file was matched to the 1973 CINCH base year file. The purpose of this procedure was to ensure that all 1973 housing units that were in the base year CINCH file were accounted for in 1980. This matching procedure was followed by the CINCH components edit which made the final determination of component status based on a detailed computer comparison of housing unit status and characteristics. The 1973 characteristics of the total 1973 inventory, of units lost from the 1973 inventory, and of units involved in a conversion or merger were obtained from the 1973 AHS records.

SAMPLE DESIGN

The estimates in this report are based on data collected for the Components of Inventory Change (CINCH) Survey which was conducted by the Bureau of the Census in conjunction with the Annual Housing Survey (AHS). The AHS is sponsored by the Department of Housing and Urban Development, while CINCH was sponsored as part of the 1980 Decennial Census of Population and Housing. The sample used for CINCH was similar to the one used for AHS with a few minor exceptions. It was spread over 461 sample areas called primary sampling units (PSU's) and was comprised of 923 counties and independent cities with coverage in the 50 States and the District of Columbia.

The CINCH survey was interviewed as a supplement to the AHS-National. That is, the 1973 CINCH sample very closely resembles the 1973 AHS-National sample and the 1980 CINCH sample, except for the exclusion of 16,000 rural units, very closely resembles the 1980 AHS-National sample. A detailed description of the AHS-National sample can be obtained from appendix B of the Current Housing Reports Series H-150 published jointly by the U.S. Department of Commerce and the U.S. Department of Housing and Urban Development.

For the CINCH base-year (1973) sample, approximately 49,000 housing units (both occupied and vacant) were eligible for interview in the base year. Of this number, 4,200 cases were classified as "Noninterviews" for various reasons. Occupied housing units were classified as "Noninterview" mainly, because the occupants refused to be interviewed after repeated calls. For vacant housing units, interviews were not obtained because an informed respondent was not found after repeated visits.

For the CINCH current-year (1980) sample, approximately 64,000 housing units (both occupied and vacant) were eligible for interview in the current year. Of this number, 4,600 cases were classified as "Noninterviews."

1973 CINCH Sample

Selection of Sample Areas—The United States was divided into areas made up of counties and independent cities referred to as primary sampling units (PSU's). These PSU's were then grouped into 376 strata, 156 of which consisted of only one PSU which was in sample with certainty. These 156 strata were mostly the larger SMSA's and were called self-representing (SR), since the sample from the sample area represented just that PSU. Each one of the other 220 strata consisted of a group of PSU's and were referred to as non-self-representing (NSR), since the sample of housing units from the sample PSU in a stratum represented the other PSU's in the stratum as well.

One PSU was selected from each NSR stratum with probability proportionate to the 1970 census population of the PSU. (This resulted in 220 NSR sample PSU's.) In addition, the NSR strata were grouped into 110 pairs and one stratum was picked at random from each pair. From this stratum, an additional PSU was selected independently of the other PSU selected from this stratum. Since the two PSU's were independently selected, it was possible for the same PSU to be selected twice. This occurred in 25 instances. An additional 85 NSR sample PSU's, were selected, thus giving a grand total of 461 PSU's.

Selection of the Sample Housing Units—Within the sample PSU's, a sample of the housing units enumerated in the 1970 Census of Population and Housing was selected in several stages. The first step was the selection of a sample of census enumeration districts, (ED's), administrative units used in the 1970 census. The probability of selection for an ED was proportional to the 1970 census counts of housing units (HU's) and persons in group quarters (GQ's) combined in the following formula:

$$\frac{\text{Number of HU's in the ED} + \frac{\text{Number of GQ Persons in the ED}}{3}}{4}$$

The next step was to select an expected cluster of about four neighboring housing units within each sample ED. For most of the ED's, the selection was accomplished using the list of addresses for the ED as compiled in the 1970 census. These are known as address ED's, and the clusters within these ED's are known as address segments. However, in those ED's where addresses were incomplete or inadequate (mostly rural areas), the selection process was accomplished using area sampling methods. In using these methods, ED's were divided into segments, (i.e., small land areas with well-defined boundaries, having an expected size of four, or a multiple of four housing units), and a segment was selected. These are known as area segments. Those selected segments with an expected size of which was a multiple of four were further subsampled at the time of enumeration so that an expected four housing units were chosen for interview. Both types of segments were selected at an overall rate of 2 in 1366.

The sample of units built since the 1970 census was selected from residential building permits issued since January 1970. Within each sample PSU, the building permits were chronologically ordered by month issued, and clusters of approximately four housing units were created. These clusters were then sampled at the rate of 2 in 1,366. Housing units constructed since the 1970 census in areas which do not issue building permits were brought into the sample as a result of the area sample described above.

Splitting of the Sample—The sample selection procedure as described above produced clusters (or segments) of size-four (each cluster contains four housing units) for the sample taken from the census address frame, the building permit frame, and the area sampling frame (mainly rural areas). It is believed that clusters of this size should result in a minimum loss in precision for estimates of housing characteristics in rural areas because of the heterogeneity of neighboring units. However, clusters of size-two, were considered to be more optimum within those areas where the housing characteristics of neighboring units tend to be very similar (i.e., urban areas and new construction units). A splitting operation was then carried out for clusters selected from the census address and the building permit frames. This consisted of halving each sample cluster from these frames. Thus, two housing units from each of these clusters were included in the survey, and two housing units were held in reserve. No splitting operation was carried out within the clusters selected from the area sampling frame; every other area sample cluster of four housing units was used for the survey, and the remaining clusters were assigned to the reserve sample.

Units Missed in the 1970 Census—Residential units in structures which were missed in the census did not have a chance of being selected, for the address segment sample, because these segments were chosen from the 1970 census list of addresses for structures containing residential units. Consequently, special operations were undertaken to identify a representative universe of these units from which a sample of supplemental units (referred to as Censup units) was chosen and interviewed. Due to time constraints associated with these special operations, only about 40 percent of the Censup units were ready to be interviewed in 1973. The rest were interviewed for the first time in the 1974 AHS. All Censup units were included in the CINCH base-year sample. For units first interviewed in 1974, the 1974 characteristics were used as the base-year (1973) characteristics.

1977 Sample Reduction

By 1977, additions to the sample, primarily from new construction, had increased the total sample size (interviews plus noninterviews) to about 81,000. The sample was reduced by about 7 percent to approximately 75,000 in 1977. However, this reduction did not include any Censup units. Thus, the overall probability of selection for these latter units remained unchanged, and for the rest of the units their probability of selection was about 1 in 1,472. Units deleted in the 1977 sample reduction were not included in the CINCH base-year sample, because there were no 1980 data to compare to the 1973 records.

Modifications to the CINCH Sample Since 1973

Updating of the 1973 Sample—Each year the address listings for AHS were updated to add housing units which were not previously on the listings. These updatings were also carried over for CINCH. If a unit was found that was present in 1973 but was not listed, it was accounted for by the adjustment factor for units missed in the base year listing of addresses, that is described in the estimation section of this appendix. In address segments, updating was done within structures (i.e., basic addresses) containing AHS sample units to discover units converted from nonresidential use to residential use ("from nonresidential" units), units resulting from changes in these structures, and units missed in the original listing of these structures. The address listings of the building permits sampled for the 1973 enumeration were not updated except in 1980 to improve the CINCH estimates of components. Permit samples selected since 1973 were not updated.

In area segments, updating of the address listings was done within defined

land areas to represent the same kinds of units picked up in address segments as well as units which moved into this area since the last updating, and, where new construction is not covered by building permit authorization, units built since the previous enumeration.

In addition, in places where new construction is covered by building permit authorization, the sample was augmented each year to include units which were built in 1974 or later. In these permit issuing areas, a sample of units built after 1973 was selected each month beginning in January 1974 from building permits issued. Within each sample PSU, the building permits were chronologically ordered by month issued, and clusters of approximately four housing units were created. These clusters were then sampled at the rate of 2 in 1,472 for units in urban areas and 2 in 736 for rural areas. This sample was then split in the same way as is described earlier in this appendix. The reason for rural areas having a greater probability of selection is that AHS had doubled the rural sample in 1974 to obtain better estimates of rural housing characteristics. For CINCH, only the rural new construction sample was doubled. As stated previously, the listings of these building permits were not updated each year.

In non-permit-issuing areas, new construction was picked up through the updating of area segments which is described earlier in this section of the appendix. For units in rural areas, the rate of selection was again twice that of units in urban areas because of the doubled rural sample.

"From nonresidential" units are units which were nonresidential at the time of the 1970 census but since then have been changed to residential use. In address segments, a sample of nonresidential units resulting in structures which were partially residential at the time of the 1970 census and contained at least one AHS sample unit was included in the CINCH sample as a result of the updating of the 1973 address listings. Units in structures which were totally nonresidential at the time of the 1970 census in address segments were picked up as a part of the "from nonresidential" supplemental sample described in the following section of this appendix.

In area segments, a sample of from nonresidential units in structures which were either partially residential or completely nonresidential in 1970 were included in the CINCH sample through the updating of the 1973 address listing. Since the number of AHS sample units that were from nonresidential was expected to be quite small, CINCH interviewed all such units found in AHS sample segments and not just those interviewed for AHS. This was done to improve the reliability of estimates of characteristics. In addition, a supplemental sample, described below, was selected to help account for coverage deficiences of "from nonresidential" units.

"From Nonresidential" Supplemental Sample—The purpose of this sample was to supplement the 1980 CINCH sample to improve the coverage in address ED's of housing units created in structures that were completely nonresidential at the time of the 1970 census. This sample was derived from listings created for the Commercial Victimization Survey (CVS), a nationally representative area sample survey, which had been conducted by the Census Bureau for the Department of Justice. In CVS, each of the sample areas had been initially canvassed, and eligible business establishments were listed. Most of the initial listings used were created in 1975. These listings were then updated every 6 months with the last updating having been implemented in 1977. All basic addresses listed in a sample area for CVS were visited, in 1980, even if they had been dropped from CVS as of the last updating.

Using the CINCH Record of Nonresidential Changes, each basic address containing a business establishment listed for CVS was visited to determine: 1) If the structure (i.e., the basic address) currently contained living quarters, 2) whether the structure was built before or after April 1, 1970, and 3) whether there were living quarters in this structure on April 1, 1970. Living quarters in structures which were built before April 1, 1970 and did not contain living quarters on April 1, 1970 were then interviewed for CINCH. These cases were later matched to the 1970 census address listings to identify those cases in address ED's and as an additional check to see if living quarters existed in this structure at the time of the 1970 census.

Structural Mergers and Conversions—The CINCH current-year sample of mergers and conversions consisted of all 1980 units, both AHS and non-AHS sample units, resulting from a merger or conversion involving a 1973 AHS sample unit. The CINCH base-year sample of mergers and conversions consisted of all the 1973 AHS sample units associated with the above.

Selection of Sample Housing Units for the 1976 Coverage Improvement Program—The 1976 Coverage Improvement Program was undertaken to correct certain deficiencies in the census address and building permit frames for the AHS-National/CINCH sample. There are other coverage improvements for AHS which are not listed here because they are not relevant to CINCH. The coverage deficiencies included the following units:

1. Houses that have been moved onto their present site since the 1970 census.
2. Mobile homes placed in parks that either had been missed in or established since the 1970 census.
3. Mobile homes which were placed outside parks since the 1970 census or were vacant at the time of the 1970 census.

A sample of mobile homes placed in parks missed by the census or established after the census was selected in two stages. During the first stage, a list of mobile home parks was obtained from commercial listings. This list was then supplemented by additional parks identified by a canvassing operation similar to that performed in ED's where area sampling methods are used. The second stage consisted of dividing the parks into clusters of an expected size of four sites. These clusters were then sampled so that the overall probability of selection was about 1 in 1,366.

Only mobile homes which had a model year of 1974 or later and mobile homes which moved to the sample site after October 1973 were included in the CINCH sample. Units which were at the sample site in 1973 were not included, because while these units would have been sames, there were no 1973 characteristics for them. The CINCH weighting procedure adjusted the base year and current year counts to represent these units.

For the remaining units, (i.e., mobile homes placed outside parks since the 1970 census, mobile homes vacant at the time of the 1970 census, and houses that had been moved onto their present site since the 1970 census), the sampling was done in three stages. First, a subsample of the regular AHS sample units from the census address frame was selected. Second, succeeding structures that had been eligible to be selected from the census address frame were then listed until eight structures (excluding mobile home parks) were found. Finally, the intervening structures that had been listed which did not have a chance of selection in AHS were identified, and the units within these structures were interviewed.

EDITING OF THE UNACCEPTABLE DATA

The objective of the processing operation is to produce a set of statistics that describes the Nation's housing as accurately and clearly as possible. To meet this objective, certain unacceptable entries were edited.

In the field, questionnaires were reviewed by a census clerk or an enumerator for omissions and certain inconsistencies, and if necessary, a followup was made to obtain missing information. As a rule, however, editing was performed by hand only when it could not be done effectively by machine.

If certain characteristics for a housing unit were still missing after the questionnaires were edited by hand, they were supplied by allocation. Allocations, or assignments of acceptable codes in place of unacceptable or missing entries, were needed most often when an entry for a given item was lacking or when the information reported for a particular item was inconsistent with another item for the same housing unit. The general procedure for changing unacceptable entries was to assign an entry for a housing unit that was consistent with entries for other housing units with similar characteristics. For example, if the unit were reported as rented but the amount of rent was missing, the computer automatically assigned the rent that was reported for the preceding renter-occupied unit. The assignment of acceptable codes in place of blanks or unacceptable entries, it is believed, enhances the usefulness of the data.

In addition, a number of separate editing procedures were done for CINCH to ensure that all necessary questionnaire items were marked and to determine if a unit was given the proper component classification (i.e., same, conversion, merger, etc.). The questionnaire item edits, the CINCH preedit, the computer matching procedure, and the components edit are described in detail in the section entitled "Processing Procedures" in Appendix C, "General Enumeration and Processing Procedures."

ESTIMATION

The CINCH sample produced the following estimates:

1. Counts and characteristics of the 1980 total housing inventory as well as counts and characteristics of the various components comprising the 1980 housing inventory; and
2. Counts and characteristics of the housing inventory as it existed in 1973 and counts and characteristics of the various components showing the disposition of the 1973 housing inventory.

The estimation procedures for CINCH are similar to AHS, with a few exceptions. A detailed description of the AHS estimation procedure can be found in the Current Housing Reports Series H-150. The CINCH estimation procedures are described below.

Noninterview Adjustment—The first step in the CINCH estimation procedure was to adjust the basic weight (i.e., the inverse of the probability of selection) to account for housing units which were eligible for interview for CINCH but for various reasons, described previously in this appendix, were not interviewed. It should be noted that, as was mentioned in the section on sample design, all 1980 units resulting from a merger or conversion associated with an AHS sample unit(s), as well as all nonresidential conversions, were included in CINCH whether they were AHS sample units or not. This increased the probability of selection for such units, and as a result, their basic weights were decreased appropriately to reflect their proper probability of selection. The noninterview adjustment was computed separately for each type of component (i.e., same, merger, conversion, etc.). In addition, it was computed separately for mobile homes and non-mobile homes and for central city, not in central city, and not in SMSA in each of the four census regions. The noninterview adjustment factor was equal to the following ratio:

$$\frac{\text{Interviewed HU's + Non-interviewed eligible HU's}}{\text{Interviewed HU's}}$$

Adjustment for Units Missed in the Base Year Listing of Addresses—A special adjustment factor was also applied to all sames, mergers, and conversions to account for units which were missed in the 1973 AHS-National listing of addresses. This factor was calculated separately for mobile homes and non-mobile homes and was computed for the same geography as the noninterview factor. The adjustment factor was equal to the following ratio:

$$\frac{\text{Weighted sample estimate of interviewed 1980 sames, mergers, and conversions + Weighted sample estimate of HU's not listed}}{\text{Weighted sample estimate of interviewed 1980 sames, mergers, and conversions}}$$

Weights for the above counts included the noninterview adjustment factor. This factor was then applied to sames, mergers, and conversions for both 1973 and 1980. Losses which were missed in the base year listing of addresses were treated as if they were type A noninterviews.

Ratio Estimation—The distribution of a particular sample of housing units chosen will differ, somewhat, from that of the entire housing inventory for certain basic characteristics. These particular characteristics are probably closely correlated with other characteristics estimated from the sample. Therefore, the precision of some of the sample estimates can be increased when, by the use of appropriate ratio estimates, the sample estimate of housing units is brought as closely into agreement as possible with the known distribution of the entire housing inventory with respect to these characteristics. Several stages of ratio estimation were employed for 1980 CINCH estimates to adjust the distribution of the sample to more closely resemble that of the entire inventory. Ratio estimates were also

used to adjust for known coverage deficiencies in the CINCH sample.

First-Stage Ratio Estimation—This procedure was employed to adjust for housing units sampled from non-self-representing (NSR) PSU's only. The first-stage ratio-estimation procedure reduces the contribution to the variance arising from the differences that existed at the time of the 1970 census in the sample distribution, by tenure and residence, of the housing inventory estimated from the sample NSR PSU's and that of the actual NSR housing inventory in each of the four census regions of the country.

The first-stage ratio-estimation factor for each residence/tenure cell by region cell was equal to the following ratio:

$$\frac{\text{1970 census housing inventory in a given residence/tenure cell for all NSR strata in a census region}}{\text{Estimate of the 1970 housing inventory in a given residence/tenure cell using weighted 1970 census housing counts for sample NSR PSUs in a census region}}$$

Factors were calculated separately for occupied and vacant units. For occupied units, the numerators of the ratios were calculated by summing the 1970 census housing unit counts for each of the 10 residence-tenure cells over all NSR stratum in a census region. The denominators were calculated by obtaining the 1970 census housing counts for each of these same cells for each NSR sample PSU, weighting these counts by the inverse of the probability of selecting that PSU, and summing these weighted counts across the NSR sample PSU's in each census region. The same procedure was followed for vacant units with the only difference being that this procedure was done for 4 residence cells, instead of the 10 residence/tenure cells that were used for occupied units, in each census region. A given computed first-stage ratio-estimation factor was then applied to the existing weight for each NSR sample unit in each first-stage ratio-estimation cell.

Adjustment for Known Coverage Deficiencies in the CINCH Sample—There were two types of units which were present in 1973 but, because of coverage deficiencies which existed in 1973, were not interviewed until 1976 when a coverage improvement sample was introduced into AHS. These units lack 1973 characteristics and are therefore not included in CINCH. The two types of units are (1) Units for which permits were issued before the 1970 census but were not completed until after the 1970 census and (2) mobile homes which have a model year of 1973 or earlier and moved to their present site prior to 1973, located in mobile home parks that were either missed in the 1970 census or established between 1970 and 1973. A ratio-estimation factor, based on 1976 characteristics, was computed to account for these units.

For the first type of unit, (i.e., units for which permits were issued before the 1970 census but were not completed until after the census) factors were computed for 24 tenure/units-in-structure/number-of-bedrooms cells for occupied units and 6 units-in-structure cells for vacant units and applied to appropriate records.

For the second type of unit, factors were computed separately for current-year, occupied or usual residence elsewhere (URE), and current-year, vacant mobile homes. For current-year occupied or URE mobile homes, factors were computed separately for 12 model-year/number-of-mobile-homes-in-group/number-of-bathroom cells and for current-year, vacant mobile homes, factors were computed for 4 model-year/number-of-bathroom cells.

1980 New Construction Ratio Estimation—This procedure was employed to adjust the sample estimate of conventional new construction for a known deficiency in the sampling of residential building permits. The time required to process permits from their initial selection to their sample implementation prohibits permits issued less than 5 months in advance of the survey from being in sample. This factor ratio adjusts the weighted sample counts of conventional new construction units built since January 1980 for a given size-of-structure cell by region. The independent estimates were derived from data based on the Survey of Construction (SOC). The factor is equal to the following ratio:

$$\frac{\text{Independent estimate of HU's-in-a-given-size-of-structure-by-region cell}}{\text{Weighted sample estimate of HU's in that same cell}}$$

This factor was then applied to all units built since January 1980 in each size-of-structure-by-region cell.

Ratio Estimation for Units Built 1970-1973—This procedure was employed to bring the CINCH estimates of conventional housing units (excluding mobile homes) built from April 1970 to December 1973 into closer agreement with corresponding estimates from SOC. This was done to help reduce the sampling variability of units built during this period. The factor was computed separately for two size-of-structure cells for each census region. The factor is equal to the following ratio.

$$\frac{\text{SOC estimate of HU's built from April 1970-December 1973 for a given cell}}{\text{CINCH weighted sample estimate of HU's built from April 1970-December 1973 in that same cell}}$$

The numerator of the above ratio was obtained from data based on the SOC. The denominator was obtained by summing the weights from base-year records in a given cell. This factor was then applied to all units built from April 1970 to December 1973 in the appropriate cell.

Base-Year and Current-Year Ratio Estimation—The base-year ratio-estimation procedure and the current-year ratio-estimation procedure were employed to ratio adjust the 1980 CINCH base-year and current-year weighted sample counts of housing units in 24 residence/tenure/race-of-head/sex-of-head cells to independent estimates from the Current Population Survey (CPS) in those cells. Vacant housing units for both years were adjusted so that they would be in closer agreement with the Housing Vacancy Survey (HVS). For vacants, the adjustment was done for 12 type-of-vacant/residence cells. For occupied units from both procedures, the factor is equal to the following ratio:

$$\frac{\text{CPS estimate of HU's in a specific residence/tenure/race-of-head/sex-of-head cell}}{\text{CINCH weighted sample estimate of HU's in that same cell}}$$

For vacant units from both procedures, the factor is equal to the following ratio:

$$\frac{\text{CPS estimate of vacant units in a specific type-of-vacant/residence cell}}{\text{CINCH weighted sample estimate of vacants in that same cell}}$$

For base-year occupied and vacant units, the numerators of the above ratios were obtained from independent esti-

mates based on CPS data used for the 1973 AHS and the 1973 HVS, respectively. The denominators were obtained by summing the weights of the 1980 CINCH base-year records from a specific cell.

For current-year occupied and vacant units, the numerators of the above ratios were obtained from independent estimates based on CPS data used for the 1980 AHS and the 1980 HVS, respectively. The denominators were obtained by summing the 1980 CINCH current-year records from a specific cell.

Base-year records were used in the calculation of the base-year ratio-estimation factor, and this factor was then applied to all base-year records (i.e., base-year sames, base-year mergers and conversions, and losses) and current-year sames. Next, current-year records (i.e., current-year sames, current-year mergers, current-year conversions, new construction, other additions, from nonresidential changes, and moved to site) were used in the calculation of the current-year ratio-estimation factor. The base-year ratio-estimation factor was applied to current-year sames prior to the calculation of the current-year ratio-estimation factor. This factor was then applied to all current-year records and base-year sames. This was done so that the weighted sample estimate of base-year sames will equal that of current-year sames.

The base-year ratio-estimation procedure and the current-year ratio-estimation procedure were iterated to bring the CINCH estimates into close agreement with both 1973 and 1980 independent estimates. The denominators of the ratios in the iterative process were obtained from the weighted estimates for CINCH after the previous stage of ratio estimation. The factors resulting from the iterative process were then applied to the existing weight on the appropriate records, and the resulting product was used as the final weight for tabulation.

The base-year ratio-estimation procedure and the current-year ratio-estimation procedure, as well as the overall estimation procedure, reduced the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. The table on the following page of this appendix summarizes the estimation procedure.

Estimates of Components Resulting From Changes in the Housing Inventory From 1970 to 1980—The 1980 CINCH Survey used the 1973 AHS as the main portion of its base-year sample, because that was the first year a complete listing of the basic addresses were available from which to measure change. As a result, no data are available to directly measure changes in the housing inventory between 1970 and 1980. Different methods of estimating the components of change between 1970 and 1980 have been suggested, but none of these methods give reliable estimates of the components. Estimates of 1970-1973 changes, which are available for some components, cannot be added to the 1973-1980 estimates of those components, because the inventory is constantly changing. Housing units which changed between 1970 and 1973 can change again between 1973 and 1980. This would affect not only the counts of changed units, but also same units. For example, a unit could be damaged by fire between 1970 and 1973 but between 1973 and 1980 be restored. By simply adding the 1970-1973 components to the 1973-1980 components, this unit would be counted twice: once as a loss (1970-1973) and once as an addition (1973-1980). In addition to being counted twice, this unit would also have an incorrect 1970-1980 component classification. The unit should be classified as a "same."

There is no basis for assuming that a linear relationship exists for the components over time. That is, 1973-1980 estimates cannot be linearly extrapolated to produce 1970-1980 estimates. In fact empirical information about housing market activity for that time period would lead us to assume that a linear relationship did *not* exist. For the above-mentioned reasons, no 1970-1980 components of change will be calculated.

RELIABILITY OF THE ESTIMATES

There are two types of possible errors associated with estimates based on data from sample surveys; sampling and nonsampling errors. A description of the sampling errors associated with the sample estimates from the 1970 census appears in the 1970 census report, HC(1)-B1, *Detailed Housing Characteristics, United States Summary.* The sampling errors for 1970 census data are much smaller than for the CINCH data. Therefore, in making comparisons between the two data sources, it can be safely assumed that the census data are subject to zero sampling errors. The following is a description of the nonsampling and sampling errors associated with the CINCH data.

Nonsampling Errors—In general, nonsampling errors can be attributed to many sources: inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness of some respondents to provide correct information, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data. As can be seen from the above list, nonsampling errors are not unique to sample surveys since they can, and do, occur in complete censuses as well.

Obtaining a measurement of the total nonsampling error associated with the estimates from a survey is very difficult, considering the number of possible sources of error. However, an attempt was made to measure some of the nonsampling errors associated with the estimates for the 1980 CINCH Survey.

Reinterview Program—A reinterview program was conducted for units in CINCH to obtain a measurement of some of the nonsampling errors associated with the CINCH estimates of components. A subsample of CINCH households were revisited to verify the component classifications given in the original interview by applying the definition of a housing unit. This was done to see if units added to the housing inventory and structural conversions all met the criteria for a housing unit, and to see whether conversions had been missed. The subsample consisted of the following households:

1. All mergers and conversions identified for CINCH
2. All units with subfamilies
3. A sample of units with nonrelatives
4. All units added to the housing inventory excluding new construction
5. A sample of same units

Estimation Procedure Summarization

Name and Description of Factor	Reason for Application	Type of Units Applied To
1. Noninterview Adjustment Factor $\frac{\text{Int. HU's + Eligible nonint. HU's}}{\text{Int. HU's}}$	To account for eligible HU's which were not interviewed	All
2. Adjustment for Units Not Listed in the Base Year Listing of Addresses $\frac{\text{Weighted estimate of 1980 sames, mergers, conversions + Weighted est. of missed units}}{\text{Weighted estimate of 1980 sames, mergers, conversions}}$	To account for units which should have been eligible to be in sample in the base year but were not on the list from which the sample was chosen	1973 and 1980 sames, mergers, and conversions
3. First Stage Radio-Estimation Factor $\frac{\text{1970 census inventory from a given cell for all NSR strata in a census region}}{\text{Est. of 1970 census inventory from a given cell using sample NSR PSU's in a census region}}$	To reduce the contribution to the variance which is due to the sampling of NSR PSU's	All units from NSR PSU's
4. Adjustment for Known Coverage Deficiences There were 2 types of adjustments (see description in text)	To account for units which did not have a chance of being in sample in 1973 but should have been	(1) All units from segments in which permits were issued and which were built from 1970-1973 (2) Certain types of mobile homes built before 1973 (see description in text)
5. 1980 New Cons. Ratio-Est. Factor $\frac{\text{Indep. est. of HU's in a cell}}{\text{Weighted est. of HU's in a cell}}$	To account for units whose permits are issued less than 5 months before the survey	All units built since January 1980
6. Ratio-Est. Factor for Units Built 1970-1973 $\frac{\text{SOC est. of units built April 1970-Dec. 1973}}{\text{CINCH est. of units built April 1970-Dec. 1973}}$	To bring the CINCH estimate into closer agreement with the SOC estimate and to reduce the sampling variability of units built during this period	All conventional HU's built between April 1970 and December 1973
7. Base-Year Ratio-Estimation Factor $\frac{\text{CPS est. of HU's in a given cell}}{\text{CINCH est. of HU's in a given cell}}$	To reduce the sampling variability	All base year units and current year sames
8. Current-Year Ratio-Estimation Factor $\frac{\text{CPS est. of HU's in a given cell}}{\text{CINCH est. of HU's in a given cell}}$	To reduce the sampling variability	All current year units and base year sames

The results of the CINCH reinterview program are not available at this time.

A reinterview program was also conducted for AHS, and as a result for CINCH also, to obtain a measurement of some of the components of the nonsampling error associated with the AHS/CINCH estimates. For CINCH, only CINCH households which were also in AHS were eligible for this program. A subsample of households were revisited and answers to some of the questions on the AHS/CINCH questionnaire were obtained again. The orginal interview and the reinterview were assumed to be two independent readings and thus were the basis for the measurement of the response error of these AHS/CINCH estimates. The reinterview program should not, in general, be used to measure the bias associated with these AHS/CINCH estimates.

As part of the reinterview, an additional check was conducted for interviewer evaluation and qualify control. This check was made at each of these households to determine if the following was done during the original interview.

1. The correct unit was visited.
2. The correct number of housing units were interviewed at that address.
3. The correct information on "Year Built" was obtained.
4. The correct information on "Tenure" was obtained.
5. The correct information on "Household Composition" was obtained.
6. The correct information on "Type of Housing Unit" was obtained.
7. The correct information on "Occupancy Status" was obtained.

The results of the 1980 AHS/CINCH reinterview study were not available at the time of publication. The results of similar reinterview studies done for AHS in 1977 and 1978, which are presented in the Census Bureau memoranda, "Reinterview Results for the Annual Housing Survey — National Sample 1977" and "Reinterview Results for the Annual Housing Survey — National Sample 1978," are presented here. In 1978, a substantial portion of the reinterview questionnaire was devoted to testing the new questions, 1.a.b. — 7.a.b. Questions 1.a. — 7.a., which were asked only at housing units interviewed in the previous year, determined if there had been a change since last year in selected nonattitudinal items. If a change had been recorded or the respondent did not know if a change had occurred, part b of the question, which collects the value of the item, was asked. The reinterview asked these items using the questions as formatted in 1977. Comparing the responses from the differently formatted questions, the 1978 reinterview found that 80 percent of the questions showed low levels of inconsistency with the remainder showing moderate levels.

The 1977 reinterview program showed moderate to high levels of inconsistency for about 21 percent of the nonattitudinal items with 56 percent of the attitudinal items showing high levels of inconsistency. Nonattitudinal items which show high levels of inconsistency pertain to additional sources of heat used, the closing off of certain rooms because of inefficient heating and disposal of garbage. Attitudinal items which show high levels of inconsistency pertain to the quality of the neighborhood. A large proportion (43 percent) of the nonattitudinal items showed a low level of inconsistency. Moderate levels indicate that there are some problems with inconsistent reporting and high levels indicate that improvements are needed in the data collection methods or that the category concepts themselves are ambiguous.

Cross tabulations involving those items, which are subject to substantial levels of inconsistency, may be subject to a large distortion as a consequence of the associated high level of response variance, and thus, can lead to erroneous conclusions.

The 1970 census reinterview results provide illustrations of possible nonsampling errors for some of the items which also appear in the AHS. For example, median value of homes was consistently underestimated by about 5 percent, and the average monthly cost of electricity and utility gas were consistently overestimated although the net effect on average gross rent was fairly small.

A possible explanation for the results of the AHS/CINCH and census reinterview studies, as well as the surveys themselves, is that the data are based on the answers given by the respondents who may lack precise information. This will introduce a certain amount of bias into the estimates. Also, because the results of the reinterview studies are derived from sample surveys, there is sampling error associated with these estimates of nonsampling error.

Therefore, the possibility of such errors should be taken into account when considering the results of these studies.

Coverage Errors—It is felt that deficiencies exist in ED's where area sampling methods are used. It had been assumed that all units located inside these ED's would be represented in the sample. However, it is believed that the 1980 AHS sample missed some housing units in ED's where area sampling methods are used because these units are not listed during the canvassing.

A deficiency in the sample frame also exists for units for which building permits were issued prior to January 1970 but construction was not completed at the time of the 1970 census. AHS has a coverage improvement program to account for this deficiency but CINCH accounts for these units by the use of a ratio-estimation factor. This ratio-estimate factor is based on counts from the 1976 AHS and is determined by year built as well as other characteristics. These characteristics (including year built) will not necessarily be the same in 1973 or 1980 as they were in 1976, introducing some nonsampling errors in the CINCH estimates.

It was mentioned previously (in the section on estimation) that the CINCH new construction sample also had deficiencies with regard to the representation of conventional new construction. During the sampling of building permits, only those issued more than 5 months before the survey began were eligible to be selected to represent conventional new construction. Due to time constraints, it is not possible to sample units whose permits are issued less than 5 months in advance of the survey. It is estimated that the 1980 CINCH sample missed about 1.4 percent (i.e., about 251,000 units) of conventional housing units built after April 1970 because the permits for these units, which were built before September 1980, were issued less than 5 months in advance of the survey. The 1980 new construction ratio-estimation procedure was employed to reduce the effect of this

deficiency, although some bias in the CINCH estimates of conventional new construction probably still exists.

Deficiencies also existed in the CVS supplemental sample (see page D–3). For most of the areas in sample, the initial listings were created in 1975. Any structures in these areas which were nonresidential at the time of the 1970 census and converted to residential use between 1973 and 1975 were not in sample. The CVS supplemental sample was also updated every 6 months up until 1977. If a basic address was totally nonresidential at the time of the 1970 census but was not listed in CVS as of 1977, it did not have a chance to be in sample.

In addition, the 1976 Coverage Improvement Program also had certain deficiencies. When the canvassing was done to identify mobile home parks that were not in the address frame or not on the commercial lists, only 92 percent of the census address frame ED's were represented.

The base-year and current-year ratio-estimation factors correct for these deficiencies as far as the count of total housing is concerned, i.e., as stated above, it adjusts the estimate of the total housing inventory to the best available estimate. However, biases of up to 2 percent would still remain for subtotals.

Rounding Errors—With respect to errors associated with processing, the rounding of estimates introduces another source of error in the data, the severity of which depends on the statistic being measured. The effect of rounding is significant relative to the sampling error only for small percentages, median number of persons, and median number of rooms when these figures are derived from relatively large bases. This means that confidence intervals formed from the standard errors given may be distorted, and this should be taken into account when considering the results of this survey. Also since medians in this report were computed using unrounded data, instead of the published rounded data, they can differ from medians calculated directly from the published data.

Sampling Errors—The particular sample used for this survey is one of a large number of possible samples of the same size that could have been selected using the same sample design. Even if the same schedules, instructions, and interviewers were used, estimates from each of the different samples would differ from each other. The variability between estimates from all possible samples is defined as sampling error. One common measure of sampling error is the standard error which measures the precision with which an estimate from a sample approximates the average result of all possible samples. In addition, the standard error, as calculated for this report, also partially reflects the variation in the estimates due to some nonsampling errors, but it does not measure, as such, any systematic biases in the data. Therefore, the accuracy of the estimates depends on both the sampling and nonsampling errors, measured by the standard error, and biases and some additional nonsampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates so that the interval includes the average result of all possible samples with a known probability. For example, if all possible samples were selected, and each of these samples was surveyed under essentially the same general conditions and an estimate and its estimated standard error were calculated for each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate, to one standard error above the estimate, would include the average result of all possible samples;

2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples;

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average result of all possible samples either is or is not contained in any particular computed interval. However, for a particular sample one can say with specified confidence that the average result of all possible samples is included in the constructed interval.

The figures presented in the following tables G through N are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

Standard Errors of Estimates of Levels—Tables G through L present the approximated standard errors applicable to 1980 national housing inventory estimates for each of the different types of components described previously in this report. Included in these tables are approximated standard errors applicable to estimates from the Northeast, North Central, South, and West Regions.

Standard Errors of Estimates of Percentages—The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total (denominator) upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more.

Tables M and N present the approximated standard errors of national and regional estimated percentages. For characteristics or components which are not specifically stated in tables M and N, factors, which are given in tables M(1) and N(1), should be applied to the approximated standard errors from the appropriate table after interpolation.

Included in tables G through N are estimates of standard errors for estimates of zero and zero percent. These estimates of standard errors are considered to be overestimates of the true standard errors and should be used primarily for construction of confidence intervals for characteristics when an estimate of zero is obtained.

Standard Errors of Ratios—For ratios of the form (100) (x/y), where x is not a subclass of y, tables M and N under-

estimate the standard error of the ratio when there is little or no correlation between x and y. For this type of ratio, a better approximation of the standard error may be obtained by letting the standard error of the ratio be approximately equal to:

$$(100)\ \left(\frac{x}{y}\right)\sqrt{\left(\frac{\sigma_x}{x}\right)^2+\left(\frac{\sigma_y}{y}\right)^2}$$

where

x = the numerator of the ratio
y = the denominator or the ratio
σ_x = the standard error of the numerator
σ_y = the standard error of the denominator

Illustration of the Use of the Standard Error Tables

Illustration I. Computation of the Standard Error of an Estimate. Table A-1 of this report shows that inside SMSA's in the United States there were 11,349,000 owner-occupied housing units with 7 rooms or more in 1980. Interpolation in standard error table G shows that the standard error of an estimate of this size is approximately 142,000. The following procedure was used in interpolating.

The information presented in the following table was extracted from standard error table G The entry "x" is the one sought.

Size of Estimate (000)	Current Year Standard Error (000)
10,000	137
11,349	x
25,000	194

By vertically interpolating between 137 and 194, the entry for "x" is determined to be 142.

$$11{,}349 - 10{,}000 = 1{,}349$$
$$25{,}000 - 10{,}000 = 15{,}000$$

$$137 + \frac{1{,}349}{15{,}000}(194-137) = 142$$

Consequently, the 68-percent confidence interval, as shown by these data, is from 11,207,000 to 11,491,000. Therefore, a conclusion that the average estimate of 1980 housing units of this type lies within a range computed in this way would be correct for roughly 68 percent of all possible samples.

Similarly, we could conclude that the average estimate, derived from all possible samples, lies within the interval from 11,122,000 to 11,576,000 housing units with 90 percent confidence; and that the average estimate lies within the interval from 11,065,000 to 11,633,000 housing units with 95 percent confidence.

Illustration II. Computation of the Standard Error of an Estimated Percentage. Table A-1 also shows that of the 11,349,000 owner-occupied housing units with 7 rooms or more inside SMSA's, 3,368,000 or 29.7 percent were in central cities. Interpolation in standard error table M (i.e., interpolation on both the base and percent) shows that the standard error of the above percentage is 0.6 percentage points. The following procedure was used in interpolating.

The information presented in the following table was extracted from table M. The entry for "p" is the one sought.

Base of percentage (000)	Estimated percentage		
	25	29.7	50
10,000	0.6	a	0.7
11,349		p	
25,000	0.4	b	0.5

1. By horizontal interpolation between 0.6 and 0.7, the entry for cell "a" is determined to be 0.6.

$$29.7 - 25.0 = 4.7$$
$$50.0 - 25.0 = 25.0$$

$$0.6 + \frac{4.7}{25.0}(0.7 - 0.6) = 0.6$$

2. By horizontal interpolation between 0.4 and 0.5, the entry for cell "b" is determined to be 0.4.

$$29.7 - 25.0 = 4.7$$
$$50.0 - 25.0 = 25.0$$

$$0.4 + \frac{4.7}{25.0}(0.5 - 0.4) = 0.4$$

3. By vertical interpolation between 0.6 and 0.4, the entry for "p" is determined to be 0.6.

$$11{,}349 - 10{,}000 = 1{,}349$$
$$25{,}000 - 10{,}000 = 15{,}000$$

$$0.6 + \frac{1{,}349}{15{,}000}(0.4 - 0.6) = 0.6$$

Consequently, the 68-percent confidence interval, as shown by these data, is from 29.1 to 30.3 percent; the 90-percent confidence interval is from 28.7 to 30.7 percent; and 95-percent confidence interval is from 28.5 to 30.9 percent.

Differences. The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different areas or the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true error. However, if there is a high negative correlation between the two characteristics, the formula will underestimate the true standard error.

Illustration III. Computation of the Standard Error of a Difference. Table A-1 shows that inside SMSA's in the United States in 1973 there were 8,471,000 owner-occupied housing units with 7 rooms or more. Thus, the apparent difference between the number of 1973 owner-occupied housing units with 7 rooms or more and the number of 1980 owner-occupied housing units with 7 rooms or more is 2,878,000. The standard error of 11,349,000 is approximately 142,000. Interpolation in standard error table G ("Base Year-All Items . . ." line) shows that the standard error on an estimate of 8,471,000 to be approximately 126,000. Therefore, the standard error of the estimated difference of 2,878,000 is about 190,000.

$$190{,}000 = \sqrt{(142{,}000)^2 + (126{,}000)^2}$$

Consequently, the 68-percent confidence interval for the 2,878,000 difference is from 2,688,000 to 3,068,000 housing units. Therefore, a conclusion that the average estimate of this difference, derived from all possible samples, lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 90-percent confidence interval is from 2,574,000 to 3,182,000 housing units, and the 95-percent confidence interval

is from 2,498,000 to 3,258,000. Thus, we can conclude with 95 percent confidence that the number of 1980 owner-occupied housing units inside SMSA's with 7 rooms or more is greater than the number of 1973 owner-occupied housing units inside SMSA's with 7 rooms or more since the 95 percent confidence interval of this difference does not include zero.

Medians. For the medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median so that there is a stated degree of confidence that the average median from all possible samples lies within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data.

1. From tables M and N, determine the standard error of a 50 percent characteristic on the base of the median. If necessary, multiply this standard error by a factor from table M(1) or table N(1).

2. Add to and subtract from 50 percent, the standard error determined in step 1.

3. Using the distribution of the characteristic, determine the confidence interval corresponding to the two points established in step 2. To find the lower end point of the confidence interval, it is necessary to know which interval of the distribution the lower percentage limit falls into. Similarly, to find the upper end point of the confidence interval, it is necessary to know which interval of the distribution the upper percentage limit falls into. Note that these two distribution intervals could be different, although this will not happen very often.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard-error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

Illustration IV. Computation of the 95-Percent Confidence Interval of a Median. Table A-3 of this report shows the median number of persons for owner-occupied housing units resulting from a conversion to more units is 2.1. The base of the distribution from which this median was determined is 239,000 housing units.

1. Interpolation using table M shows that the standard error of 50 percent on a base of 239,000 is approximately 4.8 percentage points. This standard error must then be multiplied by the factor in table M(1) for current year conversions, nonclustering characteristics (0.9613) for a resulting standard error of 4.6 percentage points.

2. To obtain a 95-percent confidence interval on the estimated median, initially add to and subtract from 50 percent twice the standard error determined in step 1. This yields percentage limits of 40.8 and 59.2.

3. From the distribution for "persons" in table A-3 of this report, the interval for owner-occupied housing units with 2 persons (for purposes of calculating the median, the category of 2 persons is considered to be from 1.5 to 2.5 persons) contains the 40.8 percent derived in step 2. About 60,000 housing units or 25.1 percent fall below this interval, and 92,000 housing units or 38.5 percent fall within this interval. By linear interpolation, the lower limit of the 95-percent confidence interval is found to be about:

$$1.5 + (2.5 - 1.5)\ \frac{(40.8 - 25.1)}{38.5} = 1.9$$

Similarly, the interval for owner-occupied housing units with 2 persons contains the 59.2 percent derived in step 2. About 60,000 housing units or 25.1 percent fall below this interval, and 92,000 housing units or 38.5 percent fall within this interval. The upper limit of the 95-percent confidence interval is found to be about:

$$1.5 + (2.5 - 1.5)\ \frac{(59.2 - 25.1)}{38.5} = 2.4$$

Thus, the 95-percent confidence interval ranges from 1.9 to 2.4 percent.

Table G. Standard Errors of Estimated Number of Housing Units: Sames and Totals for Base Year and Current Year, National and Regional Estimates

(Excluding estimates of housing units pertaining to lacking complete plumbing, households with householder of Spanish origin, lacking complete kitchen facilities, no bedrooms, no bathrooms, mobile homes, water source: individual well, source of cooking fuel, and "Other" vacant housing units. See table H for these characteristics. 68 chances out of 100)

Size of estimate (thousands)	Standard error (numbers in thousands)

[1]Clustering characteristics are characteristics associated with all units in a 2 or more unit structure; e.g., heating equipment, water source, and less than 3 bathrooms. Non-clustering characteristics are all other characteristics.

[2]Standard errors for characteristics of total losses cannot be found directly from this table. First, an estimate of the characteristic for demolitions must be made and the standard error calculated from this table. Next, an estimate of the characteristic for other types of losses must be made and the standard error calculated from this table. The standard error of the characteristic for total losses is then equal to the following:

$$\sqrt{\sigma^2 \text{demolitions} + \sigma^2 \text{other losses}}$$

where σ = standard error

NOTICE — All information which would permit identification of the individual is held in strict confidence, by law, under U.S. Code title 13, section 9(a). It may be seen only by sworn census employees and may be used only for statistical purposes.

FORM AHS-1 (CINCH) (4-24-80) U.S. DEPARTMENT OF COMMERCE BUREAU OF THE CENSUS

CONTROL CARD
COMPONENTS OF INVENTORY CHANGE SURVEY
ANNUAL HOUSING SURVEY

5a ADDRESS (Sheet _____ Line _____)
What is the exact address? *(Include House No., St., Apt. No., or other identification)*

Place, State, ZIP code

5b. Is this also the mailing address? *(If same mark box, or specify if different. Include ZIP code.)* ☐

5c. Special place name | Type code | Sample No.

INTRODUCTION — "Good morning. I am (your name) from the United States Bureau of the Census. Here is my identification card. We are taking a housing survey in (name of the city or county) and all over the country. I have some questions I would like to ask you."

6. When was this structure originally built?
☐ April 1, 1970 or later → MO. | YR.
1 ☐ 1969 to March 31, 1970
2 ☐ 1965 to 1968
3 ☐ 1960 to 1964
4 ☐ 1950 to 1959
5 ☐ 1940 to 1949
6 ☐ 1939 or earlier

FILL ITEMS 7 AND 8 FOR AREA SEGMENTS ONLY

7. YEAR BUILT
☐ DETERMINE
☐ Before 4/1/70 *(Continue interview)*
☐ After 4/1/70 *(Complete 8c when required and END INTERVIEW)*
☐ DO NOT DETERMINE

8. ASK
a. Are there any occupied or vacant living quarters besides your own in this building? Y → Fill Table X / N
b. Are there any occupied or vacant living quarters besides your own on this floor? Y → Fill Table X / N
c. Is there any other building on this property for people to live in — either occupied or vacant? Y → Fill Table X / N
d. None

9. LIVING QUARTERS
a. Access: 1 ☐ Direct 2 ☐ Through another unit
b. HOUSING unit
1 ☐ House, apartment, flat
2 ☐ HU, in nontransient hotel, motel, etc.
3 ☐ HU, permanent in transient hotel, motel, etc.
4 ☐ HU, in rooming house
5 ☐ Mobile home or trailer with NO permanent room added
6 ☐ Mobile home or trailer with one or more permanent rooms added
7 ☐ HU not specified above *(Describe in notes)*
c. OTHER unit *(Treat as Type B noninterview)*
8 ☐ Quarters not HU in rooming or boarding house
9 ☐ Unit not permanent in transient hotel, motel, etc.
10 ☐ Unoccupied tent site or trailer site
11 ☐ OTHER unit not specified above *(Describe in notes)*
→ Go to AHS-2 (CINCH)

10 Line number (Circle Line No. of respondent)	11a. NAME (last name first) — What are the names of all persons living or staying here? Start with the name of the person or one of the persons who owns or rents this home. *(List all persons staying here and all persons who usually live here who are absent. Be sure to INCLUDE infants under 1 year of age.)*	11b. RELATIONSHIP TO REFERENCE PERSON *(Example reference person, husband, wife, son, daughter-in-law, partner, lodger, lodger's wife, etc.)*	11c HOUSE-HOLD MEMBER — Is this . . .'s usual place of residence?	ASK 12 BELOW	13. What is . . .'s date of birth? *Enter in numerals* — Month a.	Day b.	Year c.	14 AGE *If under 1 year of age, enter "0"* — YEAR 80	81	82	83	84	15 MARITAL STATUS — For persons 14 yrs. + Is . . . now married, widowed, divorced, separated, or has . . . never been married? M., Wd., D., Sep., or NM	16. What is the race of each person in this household? *(Show flashcard C)* 1 — White 2 — Black 4 — Asian, Pacific Islander 5 — American Indian, Aleut, Eskimo 6 — Other — *Specify below* ENTER CODE	17. SEX *Circle M — Male or F — Female*	18. CHANGES IN HOUSEHOLD COMPOSITION *(Enter date you discovered the change and reason for change) Continue in notes if necessary* — Line No.
1			Y N														M F	1			
2			Y N														M F	2			
3			Y N														M F	3			
4			Y N														M F	4			
5			Y N														M F	5			
6			Y N														M F	6			
7			Y N														M F	7			
8			Y N														M F	8			
9			Y N														M F	9			

Ask EACH TIME household is interviewed. (If "Yes," enter name in 11a above.)
I have listed as living here *(Read names in item 11a)*

12 Have I missed:	YEAR 80	81	82	83	84
– Any babies or small children?	Y N	Y N	Y N	Y N	Y N
– Any lodgers, boarders, or persons in your employ who live here?	Y N	Y N	Y N	Y N	Y N
– Anyone who usually lives here but is away at present traveling, at school, or in a hospital?	Y N	Y N	Y N	Y N	Y N
– Anyone else staying here?	Y N	Y N	Y N	Y N	Y N

UPDATE ITEM 11c AS APPLICABLE

19. What is the highest grade (or year) of regular school which . . . *(Reference person)* has COMPLETED?
On our last visit the highest grade (or year) of regular school which . . . *(Reference person)* COMPLETED was . . . *(Read entry from previous year).* Has this changed?
☐ Never attended school
☐ Kindergarten ☐ 1st ☐ 2nd ☐ 3rd ☐ 4th ☐ 5th ☐ 6th ☐ 7th ☐ 8th ☐ 9th ☐ 10th ☐ 11th ☐ 12th
College (Academic year) ☐ C1 ☐ C2 ☐ C3 ☐ C4 ☐ C5 ☐ C6 or more

UPDATE IF REFERENCE PERSON HAS CHANGED

20. What is . . .'s *(Reference person)* origin or descent? *(SHOW flashcard A)*
1 ☐ Mexican American
2 ☐ Chicano
3 ☐ Mexican
4 ☐ Mexicano
5 ☐ Puerto Rican
6 ☐ Cuban
7 ☐ Central or South American
8 ☐ Other Spanish — *Specify* _____
9 ☐ Other — *Specify* _____

UPDATE IF REFERENCE PERSON HAS CHANGED OR HOUSEHOLD IS URE

21. When did . . . *(Reference person)* move into this house (apartment)?
After April 1, 1970 → Month (01–12) / Year
OR
1 ☐ 1965 to April 1, 1970
2 ☐ 1960 to 1964
3 ☐ 1950 to 1959
4 ☐ 1949 or earlier
→ Go to AHS-2 (CINCH)

38a USE OF TELEPHONE
Is there a telephone on which you can be called?
☐ Yes ☐ No – *SKIP to 38c*

b. What is the telephone number? *(Include area code)*
_____ Number

c. When is the best time for an interview?
a.m.
p.m.

39 Month and year (example 10/80)

40 RECORD OF VISITS AND TELEPHONE INTERVIEWS

Tally of personal visits a.	Tally of telephone callbacks b.	Occupancy status c. Reg. Occu.	Vac.	URE Occu.	Noninterview reason code d.	Unit boarded-up e. Yes	No	Notes f.	Supervisor's use O = Observed R = Reinterview g.

41. NONINTERVIEW REASON CODES *(Transcribe to item 40d)*

TYPE A
1 – No one home
2 – Temporarily absent
3 – Refused
4 – Unable to locate
5 – Other occupied – *Specify in 40d*

TYPE B
10 – Unit for nonresidential use (e.g., business, school, or commercial storage)
11 – OTHER unit, except unoccupied site for mobile home or tent
12 – Unoccupied site for mobile home or tent
14 – Scheduled to be demolished . . . . . } *Fill item 40e*
15 – Condemned or occupancy prohibited by law . . . . . } *Fill item 40e*
16 – Interior exposed to the elements . . . . } *Fill item 40e*
17 – Unit severely damaged by fire . . . . . } *Fill item 40e*
18 – Other – *Specify in 40d* . . . . . } *Fill item 40e*

TYPE C
31 – Demolished
32 – Disaster loss (flood, tornado, etc.)
33 – Disaster loss – fire
34 – House or mobile home moved
37 – Other – *Specify in 40d*

Section III – VACANT UNITS

1a. How many living quarters, both occupied and vacant, are there in this house (building)?

(101)
1 ☐ Mobile home or trailer (no permanent room attached) – *Skip to 2a*
2 ☐ One, detached from any other building
3 ☐ One, attached to one or more buildings
4 ☐ 2
5 ☐ 3 or 4
6 ☐ 5 to 9
7 ☐ 10 to 19
8 ☐ 20 to 49
9 ☐ 50 or more
} *Skip to 2a*

OBSERVATION
b. Is any part of this property used as a commercial establishment?

(103)
1 ☐ Yes
2 ☐ No

OBSERVATION
c. Is any part of this property used as a medical or dental office?

(104)
1 ☐ Yes
2 ☐ No

CHECK ITEM A

☐ Unit was Type A or B noninterview last enumeration period (See cc item 40d) – *Ask 2a*
(See item 7, page 1)
☐ Unit in sample last enumeration period (first box marked in item 7a) – *Skip to item 5, page 6*
☐ Unit in sample for first time this enumeration period (second box marked in item 7a) – *Ask 2a*

2a. How many stories (floors) are there in this house (building)? Do not count the basement.

(MARK mobile homes by observation)

(105)
1 ☐ 1 to 3 – *Skip to 3*
2 ☐ 4 to 6
3 ☐ 7 to 12
4 ☐ 13 or more

OBSERVATION
b. Is there a passenger elevator in this building?

(106)
1 ☐ Yes
2 ☐ No

3. Does this house (building) have complete plumbing facilities; that is, hot and cold piped water, a flush toilet and a bathtub or shower, which are available for the use of the intended occupants of this house (apartment)?

☐ Yes → **Are these facilities only for the use of the intended occupants?**

(107)
1 ☐ Yes – Used for this household only – *Ask 4*
2 ☐ No – Also used by another household – *Skip to 5*
3 ☐ No – *Skip to 5*

4. A complete bathroom is a room with a flush toilet, bathtub or shower, and a washbasin with piped water.
A half bathroom has at least a flush toilet or a bathtub or shower, but does not have all the facilities for a complete bathroom.

How many complete bathrooms and half bathrooms does this house (apartment) have?

(Mark only one box)

(108)
1 ☐ Complete plumbing facilities but not in one room
2 ☐ 1 complete bathroom
3 ☐ 1 complete bathroom plus a half bath with **no** flush toilet
4 ☐ 1 complete bathroom plus a half bath **with** flush toilet
5 ☐ 2 complete bathrooms
6 ☐ More than 2 complete bathrooms

Section III – VACANT UNITS – Continued

5. What type of heating equipment does this house (apartment) have?

(MARK heating equipment to be used most)

SHOW FLASHCARD B

(109)
1 ☐ Central warm-air furnace with ducts in individual rooms
2 ☐ Heat pump
3 ☐ Steam or hot water system
4 ☐ Built-in electric units (permanently installed in wall, ceiling, or baseboard)
5 ☐ Floor, wall, or pipeless furnace
6 ☐ Room heaters WITH flue or vent burning gas, oil, or kerosene
7 ☐ Room heaters WITHOUT flue or vent burning gas, oil, or kerosene
8 ☐ Fireplaces, stoves, or portable room heaters
9 ☐ Unit has no heating equipment

6a. Is this unit intended for year-round use, for occupancy only on a seasonal basis, or for use by migrant workers?

☐ YEAR ROUND – *Ask b*

Seasonal

(117)
10 ☐ Summers only . . . . . } *Skip to 7*
11 ☐ Winters only . . . . . } *Skip to 7*
12 ☐ Other seasonal – *Specify in Notes on page 7* . . . . . } *Skip to 7*

9 ☐ Migratory – *Skip to 7*

b. Is this house (apartment) for rent, for sale only, rented not occupied, sold not occupied, held for occasional use, or something else?

(Probe to be asked only for cooperatives)
To the Census Bureau, a cooperative is property which is owned by a corporation. Each shareholder is entitled to occupy an individual unit. Is this what you mean when you say this is a cooperative?

(117)
1 ☐ Vacant – for rent OR (for sale or for rent)

Vacant – for sale ONLY
2 ☐ Regular ownership
3 ☐ Condominium ownership
4 ☐ Cooperative ownership – *Ask probe*

5 ☐ Rented, not occupied
6 ☐ Sold, not occupied
7 ☐ Held for occasional use
8 ☐ Other vacant – *Specify* _____

7. How many months has this house (apartment) been vacant?

(119)
1 ☐ Less than 1 month
2 ☐ 1 month up to 2 months
3 ☐ 2 months up to 6 months
4 ☐ 6 months up to 12 months
5 ☐ 1 year up to 2 years
6 ☐ 2 years or more

OBSERVATION

8a. Is the unit boarded-up?

(120)
1 ☐ Yes
2 ☐ No

OBSERVATION

b. Are there any buildings (other than this building) with windows broken or boarded-up on this street?

(121)
1 ☐ Yes
2 ☐ No

Section III – VACANT UNITS – Continued

9. **Does this place have 10 acres or more?** (122)
   1 ☐ Yes, 10 acres or more
   2 ☐ No, less than 10 acres

CHECK ITEM B

VACANCY STATUS *(See item 6b, page 6)*

FOR SALE ONLY

☐ **A CONDOMINIUM** – *Ask 10*

☐ **A COOPERATIVE** – *Skip to Control Card, Item 38a*

REGULAR OWNERSHIP

☐ One-unit structure on less than 10 acres and there is no commercial establishment or medical or dental office on the property ("No" in items 1b and 1c) – *Ask 10*

☐ All others – *Skip to Control Card, Item 38a*

FOR RENT

☐ One-unit structure on less than 10 acres – *Skip to item 11, page 8*

☐ One-unit structure on 10 acres or more – *Skip to Control Card, Item 38a*

☐ Two-or-more unit structure or a mobile home or trailer – *Skip to item 11, page 8*

☐ **ALL OTHERS** (Other vacants, units rented or sold, units held for occasional use, seasonal, and similar units) – *Skip to Control Card, Item 38a*

NOTES

Section III – VACANT UNITS – Continued

10. What is the sole price asked for this property (condominium unit)?

SHOW FLASHCARD D

(126)

1 ☐ Less than $5,000
2 ☐ $ 5,000 – $ 7,499
3 ☐ 7,500 – 9,999

GENERAL

The results of the 1980 Census of Population and Housing are issued in three forms: printed reports, computer tape files, and microfiche. Most of the reports listed are issued on a flow basis through 1983. A few may be issued later, such as Subject Reports and Evaluation and Reference Reports.

The publications of the 1980 census are released under three subject titles: *1980 Census of Population and Housing, 1980 Census of Population, and 1980 Census of Housing.* The description of the publication program below is organized in sections, by census title, followed by the reports under each title. It should be noted that a number of population census reports contain some housing data and a number of housing census reports contain some population data. Following the description of the publication program are sections on computer tapes, maps, and microfiche.

The data product descriptions include listings of geographic areas for which data are summarized in that product. Note that the term "place" refers to incorporated places and census designated (or unincorporated) places, as well as towns and townships in 11 States (the 6 New England States, the 3 Middle Atlantic States, Michigan, and Wisconsin).

Order forms for these materials are available, subject to availability of the data product, from Data User Services Division, Customer Services, Bureau of the Census, Washington, D.C. 20233; Census Bureau Regional Offices; U.S. Department of Commerce District Offices; and State Data Centers. After issuance, census reports are on file in many libraries and are available for examination at any Department of Commerce District Office or Census Bureau Regional Office.

PUBLICATIONS

Population and Housing Census Reports

PHC80-1, Block Statistics—These reports, which are issued on microfiche rather

than in print form, present population and housing unit totals and statistics on selected characteristics which are based on complete-count tabulations. Data are shown for blocks in urbanized areas and selected adjacent areas, for blocks in places of 10,000 or more inhabitants, and for blocks in areas which contracted with the Census Bureau to provide block statistics.

The set of reports consists of 374 sets of microfiche and includes a report for each standard metropolitan statistical area (SMSA), showing blocked areas within the SMSA, and a report for each State and for Puerto Rico, showing blocked areas outside SMSA's. In addition to microfiche, printed detailed maps showing the blocks covered by the particular report are available as well as a U.S. Summary, which is an index to the set.

PHC80-2, Census Tracts—Statistics for most of the population and housing subjects included in the 1980 census are presented for census tracts in SMSA's and in other tracted areas. Both complete-count data and sample data are included. Most statistics are presented by race and Spanish origin for areas with at least a specified number of persons in the relevant population group.

There is one report for each SMSA, as well as one for each of the States and Puerto Rico which have tracted areas outside SMSA's. In addition, maps showing the boundaries and identification numbers of census tracts in the SMSA are available as well as a U.S. Summary, which is an index to the set and also provides a historical listing of the total number of tracts by area.

PHC80-3, Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas—Statistics are presented on total population and on complete-count and sample population characteristics such as age, race, education, disability, ability to speak English, labor force, and income, and on total housing units and housing characteristics such as value, age of structure, and rent. These statistics are shown for the following areas or their equivalents: States, SMSA's, counties, county subdivisions (those which are functioning general-purpose local governments), and incorporated places.

There is one report for each State, the District of Columbia, and Puerto Rico. This series does not include a U.S. Summary.

PHC80-4, Congressional Districts of the 98th Congress—These reports present complete-count and sample data for congressional districts of the 98th Congress. The reports reflect redistricting based on the 1982 elections. One report is issued for each of the 50 States and the District of Columbia.

PHC80-S1-1, Provisional Estimates of Social, Economic, and Housing Characteristics—This report presents provisional estimates based on sample data collected in the 1980 census. Data on social, economic, and housing characteristics are shown for the United States as a whole, each State, the District of Columbia, and SMSA's of 1 million or more inhabitants.

These data are based on a special subsample of the full census sample. The sample, which represents about 1.6 percent of the total population, was developed to provide users with initial data on characteristics of the population and housing units for the Nation and large areas.

PHC80-S2, Advance Estimates of Social, Economic, and Housing Characteristics—These reports present advance sample data from the 1980 census including such social and economic characteristics of the population as education, migration, labor force, and income as well as housing characteristics such as structural information, mortgage, and gross rent.

The set consists of 50 paperbound reports and includes one report for each State and the District of Columbia. No report will be issued for the United States as a whole.

Each report presents population and housing characteristics for the State, its counties or comparable areas, and places of 25,000 or more inhabitants. Selected data are shown for four race groups (White; Black; combined American Indian, Eskimo, and Aleut; and Asian and Pacific Islander) as well as for persons of Spanish origin.

Population Census Reports

PC80-1, Volume 1, Characteristics of the Population—This volume presents final population counts and statistics on population characteristics. It consists of reports for the following 57 areas: the United States, each of the 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas—Guam, the Virgin Islands of the United States, American Samoa, and the Northern Mariana Islands and the remainder of the Trust Territory of the Pacific Islands. The volume consists of four chapters for each area, chapters A, B, C, and D. Chapters A and B present data collected on a complete-count basis, and chapters C and D present estimates based on sample information, except for the Outlying Areas where all data were collected on a complete-count basis.

The population totals presented in chapters A and B may differ from the counts presented earlier in the PHC80-V reports because corrections were made for errors found after the PHC80-V reports were issued. Chapters B, C, and D present statistics by race and Spanish origin for areas with at least a specified number of the relevant population group.

The U.S. Summary reports present statistics for the United States, regions, divisions, States, and selected areas below the State level. The State or equivalent Area reports (which include the District of Columbia, Puerto Rico, and the Outlying Areas) present statistics for the State or equivalent area and its subdivisions.

Statistics for each of the 57 areas are issued in separate paperbound reports of chapters A, B, C, and D.

PC80-1-A, Chapter A, Number of Inhabitants—Final population counts are shown for the following areas or their equivalents: States, counties, county subdivisions, incorporated places and census designated places, standard consolidated statistical areas (SCSA's), SMSA's, and urbanized areas. Selected tables contain population counts by urban and rural residence. Many tables contain population counts from previous censuses.

PC80-1-B, Chapter B, General Population Characteristics—Statistics on household relationship, age, race, Spanish origin, sex, and marital status are shown for the following areas or their equivalents: States, counties (by total and rural residence), county subdivisions, places of 1,000 or more inhabitants, SCSA's,

SMSA's, urbanized areas, American Indian reservations, and Alaska Native villages.

PC80-1-C, Chapter C, General Social and Economic Characteristics—Statistics are presented on nativity, State or country of birth, citizenship and year of immigration for the foreign-born population, language spoken at home and ability to speak English, ancestry, fertility, family composition, type of group quarters, marital history, residence in 1975, journey to work, school enrollment, years of school completed, disability, veteran status, labor force status, occupation, industry, class of worker, labor force status in 1979, income in 1979, and poverty status in 1979. In addition, data on subjects shown in the PC80-1-B reports are presented in this report in more detail.

Each subject is shown for some or all of the following areas or their equivalents: States, counties (by rural and rural-farm residence), places of 2,500 or more inhabitants, SCSA's, SMSA's, urbanized areas, American Indian reservations, and Alaska Native villages.

PC80-1-D, Chapter D, Detailed Population Characteristics—Statistics on most of the subjects covered in the PC80-1-C reports are presented in this report in considerably greater detail and cross-classified by age, race, Spanish origin, and other characteristics. Each subject is shown for the State or equivalent area, and some subjects are also shown for rural residence at the State level. Most subjects are shown for SMSA's of 250,000 or more inhabitants, and a few are shown for central cities of these SMSA's.

PC80-2, Volume 2, Subject Reports—Each of the reports in this volume focuses on a particular subject and provides highly detailed distributions and cross-classifications on a national, regional, and divisional level. A few reports show statistics for States, SMSA's, large cities, American Indian reservations, or Alaska Native villages. Separate reports are issued on such subjects as racial and ethnic groups, type of residence, fertility, families, marital status, migration, education, employment, occupation, industry, journey to work, income, poverty status, and other topics.

PC80-S1, Supplementary Reports—These reports present special compilations of 1980 census statistics dealing with specific population subjects.

Housing Census Reports

HC80-1, Volume 1, Characteristics of Housing Units—This volume presents final housing unit counts and statistics on housing characteristics. It consists of reports for the following 57 areas: the United States, each of the 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas—Guam, the Virgin Islands of the United States, American Samoa, and the Northern Mariana Islands and the remainder of the Trust Territory of the Pacific Islands. The volume consists of two chapters for each area, chapters A and B. Chapter A presents data collected on a complete-count basis, and chapter B presents estimates based on sample information, except for the Outlying Areas where all data were collected on a complete-count basis.

The housing totals presented in this report may differ from the counts presented earlier in the PHC80-V reports because corrections were made for errors found after the PHC80-V reports were issued. Both chapters present statistics by race and Spanish origin for areas with at least a specified number of the relevant population group.

The U.S. Summary reports present statistics for the United States, regions, divisions, States, and selected areas below the State level. The State or equivalent Area reports (which include the District of Columbia, Puerto Rico, and the Outlying Areas) present statistics for the State or equivalent area and its subdivisions.

Statistics for each of the 57 areas are issued in separate paperbound reports of chapters A and B.

HC80-1-A, Chapter A, General Housing Characteristics—Statistics on units at address, tenure, condominium status, number of rooms, persons per room, plumbing facilities, value, contract rent, and vacancy status are shown for some or all of the following areas or their equivalents: States, counties, county subdivisions, places of 1,000 or more inhabitants, SCSA's, SMSA's, urbanized areas, American Indian reservations, and Alaska Native villages. Selected tables contain housing characteristics by urban and rural residence.

HC80-1-B, Chapter B, Detailed Housing Characteristics—Statistics on units in structure, year moved into unit, year structure built, heating equipment, fuels, air-conditioning, source of water, sewage disposal, gross rent, and selected monthly ownership costs are shown for some or all of the following areas or their equivalents: States, counties, places of 2,500 or more inhabitants, SCSA's, SMSA's, urbanized areas, American Indian reservations, and Alaska Native villages. Selected tables show housing characteristics for rural and rural farm residence at the State and county level. Some subjects included in the HC80-1-A reports are also covered in this report in more detail.

HC80-2, Volume 2, Metropolitan Housing Characteristics—This volume presents statistics on most of the 1980 housing census subjects in considerable detail and cross-classification. Most statistics are presented by race and Spanish origin for areas with at least a specified number of the relevant population group. Data are shown for States or equivalent areas, SMSA's and their central cities, and other cities of 50,000 or more inhabitants.

There is one report for each SMSA and one report for each State and Puerto Rico. The set includes a U.S. Summary report showing these statistics for the United States and regions.

HC80-3, Volume 3, Subject Reports—Each of the reports in this volume focuses on a particular subject and provides highly detailed distributions and cross-classifications on a national, regional, and divisional level. Separate reports are issued on housing of the elderly, mobile homes, and American Indian households.

HC80-4, Volume 4, Components of Inventory Change—This volume consists of two reports presenting statistics on the 1980 characteristics of housing units which existed in 1973, as well as on newly constructed units, conversions, mergers, demolitions, and other additions and losses to the housing inventory between 1973 and 1980. These reports present data derived from a sample survey conducted in the fall of 1980. Data are presented for the United States and regions in report I. Report II has two parts: Part A presents data for that group of SMSA's (not individually identified)

with populations of 1 million or more at the time of the 1970 census, and part B presents data for that group of SMSA's (not individually identified) with populations of less than 1 million at the time of the 1970 census.

HC80-5, Volume 5, Residential Finance—This volume consists of one report presenting statistics on the financing of nonfarm homeowner and rental and vacant properties, including characteristics of the mortgage, property, and owner. The statistics are based on a sample survey conducted in the spring of 1981. Data are presented for the United States and regions. Some data are presented by inside and outside SMSA's and by central cities.

HC80-S1-1, Supplementary Reports—These reports present statistics from the 1980 Census of Housing on general characteristics of housing units for the 50 States and the District of Columbia, counties, and independent cities.

Evaluation and Reference Reports

PHC80-E, Evaluation and Research Reports—These reports present the results of the extensive evaluation program conducted as an integral part of the 1980 census. This program relates to such matters as completeness of enumeration and quality of the data on characteristics.

PHC80-R, Reference Reports—These reports present information on the various administrative and methodological aspects of the 1980 census. The series includes:

PHC80-R1, Users' Guide—This report covers subject content, procedures, geography, statistical products, limitations of the data, sources of user assistance, notes on data use, a glossary of terms, and guides for locating data in reports and tape files. The guide is issued in loose-leaf form and sold in parts (R1-A, B, etc.) as they are printed.

PHC80-R2, History—This report describes in detail all phases of the 1980 census, from the earliest planning through all stages to the dissemination of data and evaluation of results. It contains detailed discussion of 1980 census questions and their use in previous decennial censuses.

PHC80-R3, Alphabetical Index of Industries and Occupations—This report was developed primarily for use in classifying responses to the questions on the kind of business (industry) and kind of work (occupation) in which the respondent is engaged. The index lists approximately 20,000 industry and 29,000 occupation titles in alphabetical order.

PHC80-R4, Classified Index of Industries and Occupations—This report defines the industrial and occupational classification systems adopted for the 1980 Census of Population. It presents the individual titles that constitute each of the 231 industry and 503 occupation categories in the classification systems. The individual titles are the same as those shown in the Alphabetical Index. The 1980 occupation classification reflects the new U.S. Standard Occupational Classification (SOC). As in the past, the 1980 industry classification reflects the Standard Industrial Classification (SIC).

PHC80-R5, Geographic Identification Code Scheme—This report identifies the names and related geographic codes for each State, county, minor civil division, place, region, division, SCSA, SMSA, American Indian reservation, and Alaska Native village for which the Census Bureau tabulated data from the 1980 census.

COMPUTER TAPES

Summary Tape Files

In addition to the printed and microfiche reports, results of the 1980 census also are provided on computer tape in the form of summary tape files (STF's). These data products have been designed to provide statistics with greater subject and geographic detail than is feasible or desirable to provide in printed and microfiche reports. The STF data are made available at nominal cost. The data are subject to suppression of certain detail where necessary to protect confidentiality.

There are five STF's (listed below), and the amount of geographic and subject detail presented varies. STF's 1 and 2 contain complete-count data, and STF's 3, 4, and 5 contain sample data. Note that the term "cells" used below refers to the number of subject statistics provided for each geographic area, and the number of cells is indicative of the detail of the subject content of the file.

Each of the STF's generally consists of two or more files which provide different degrees of geographic detail and, in some cases, race/Spanish origin cross-classification. For each of the files there is a separate tape or tapes for each State, the District of Columbia, and Puerto Rico. Selected files (STF 1 and STF 3) are also produced for Guam, the Virgin Islands of the United States, American Samoa, and the Northern Mariana Islands and the remainder of the Trust Territory of the Pacific Islands. These tapes are issued on a State-by-State basis and are followed by a national summary tape for the particular file. More complete descriptions of the STF's than given in the summaries below can be found in the technical documentation of the specific file and in the PHC80-R1, *Users' Guide.*

STF 1—This STF provides 321 cells of complete-count population and housing data. Data are summarized for the United States, regions, divisions, States, SCSA's, SMSA's, urbanized areas, congressional districts, counties, county subdivisions, places, census tracts, enumeration districts in unblocked areas, and blocks and block groups in blocked areas. The data include those shown in the PHC80-1, PHC80-3 (complete-count), and PC80-1-A reports.

STF 2—This STF contains 2,292 cells of detailed complete-count population and housing data, of which 962 are repeated for each race and Spanish origin group present in the tabulation area. Data are summarized for the United States, regions, divisions, States, SCSA's, SMSA's, urbanized areas, counties, county subdivisions, places of 1,000 or more inhabitants, census tracts, American Indian reservations, and Alaska Native villages. The data include those shown in the PHC80-2 (complete-count), PC80-1-B, and HC80-1-A reports.

STF 3—This STF contains 1,126 cells of data on various population and housing subjects collected on a sample basis. The areas covered are the same as in STF 1, excluding blocks. The data include those shown in the PHC80-3 (sample) reports.

STF 4—This STF is the geographic counterpart of STF 2, but the number of cells of data is greater (approximately 8,400). STF 4 provides data covering virtually all of the population and housing subjects collected on a sample basis, as well as some of the complete-count subjects. Some of the statistics are repeated for race, Spanish origin, and ancestry groups. Data are summarized for areas similar to those shown in STF 2, except that data for places are limited to those with 2,500 or more inhabitants. The data include those shown in the PHC80-2 (sample), PC80-1-C, and HC80-1-B reports.

STF 5—This STF contains over 100,000 cells of data on various population and housing subjects collected on a sample basis and provides detailed tabulations and cross-classifications for States, SMSA's, counties, cities of 50,000 or more inhabitants and central cities. Most subjects are classified by race and Spanish origin. The data include those shown in the PC80-1-D and HC80-2 reports.

Other Computer Tape Files

P.L. 94-171, Population Counts—In accordance with Public Law (P.L.) 94-171, the Census Bureau provides population tabulations to all States for legislative reapportionment/redistricting. The file is issued on a State-by-State basis. It contains population counts classified by race and Spanish origin. The data are tabulated for the following levels of geography as applicable: States, counties, county subdivisions, incorporated places, census tracts, blocks and block groups in blocked areas, and enumeration districts in unblocked areas. For States participating in the voluntary program to define election precincts in conjunction with the Census Bureau, the data are also tabulated for election precincts.

Master Area Reference Files 1 and 2 (MARF)

MARF 1—This geographic reference file is an extract of STF 1 designed for those who require a master list of geographic codes and areas, along with basic census counts arranged hierarchically from the State down to the block group and enumeration district levels and is issued on a State-by-State basis. The file contains records for States, counties, county subdivisions, places, census tracts, enumeration districts in unblocked areas, and block groups in blocked areas. Each record shows the total population by five race groups, population of Spanish origin, number of housing units, number of households, number of families, and a few other items.

MARF 2—This file is the same as the MARF 1 with the latitude and longitude coordinates for a representative point (centroid) in each block group (BG) or enumeration district (ED) outside block numbered areas.

Geographic Base File/Dual Independent Map Encoding (GBF/DIME)—These files are computer representations of the Metropolitan Map Series, including address ranges and ZIP Codes, which generally cover the urbanized portions of SMSA's. GBF/DIME files are used to assign census geographic codes to addresses (geocoding). The files are available by SMSA.

Public-Use Microdata Samples—Public-use microdata samples are computerized files containing most population and housing characteristics as shown on a sample of individual census records. These files contain no names or addresses, and geographic identification is sufficiently broad to protect confidentiality.

There are three mutually exclusive samples, the A sample including 5 percent of all persons and housing units, and the B and C samples each including 1 percent of all persons and housing units. States and most large SMSA's will be identifiable on one or more of the files. Microdata files allow the user to prepare customized tabulations.

Census/EEO Special File—This file provides sample census data with specified relevance to EEO and affirmative action uses. The file contains two tabulations, one with detailed occupational data and the other with years of school completed by age. The data in both tabulations are crossed by sex, race, and Spanish origin. These data are provided for all counties, for all SMSA's, and for places with a population of 50,000 or more.

MAPS

Maps necessary to define areas are generally published and included as part of the corresponding reports. Maps are published for Block Statistics (PHC80-1) and Census Tracts (PHC80-2), but must be purchased separately from the report. Maps necessary to define enumeration districts are available on a cost-of-reproduction basis.

MICROFICHE

Some of the computer tape products are available on microfiche. The STF microfiche are issued for each State or Area and for the United States. These include:

STF 1 Microfiche—Data from STF 1 are presented in tabular form for all the STF 1 geographic levels described previously, except blocks.

STF 3 Microfiche—Data from STF 3 are presented in tabular form for all the STF 3 geographic levels.

P.L. 94-171 Counts Microfiche—The data from the P.L. 94-171 computer file are presented in a listing format.

1980 Census of Population and Housing

Users' Guide

The **Users' Guide**, a reference work on the 1980 census, is now available. It consists of:

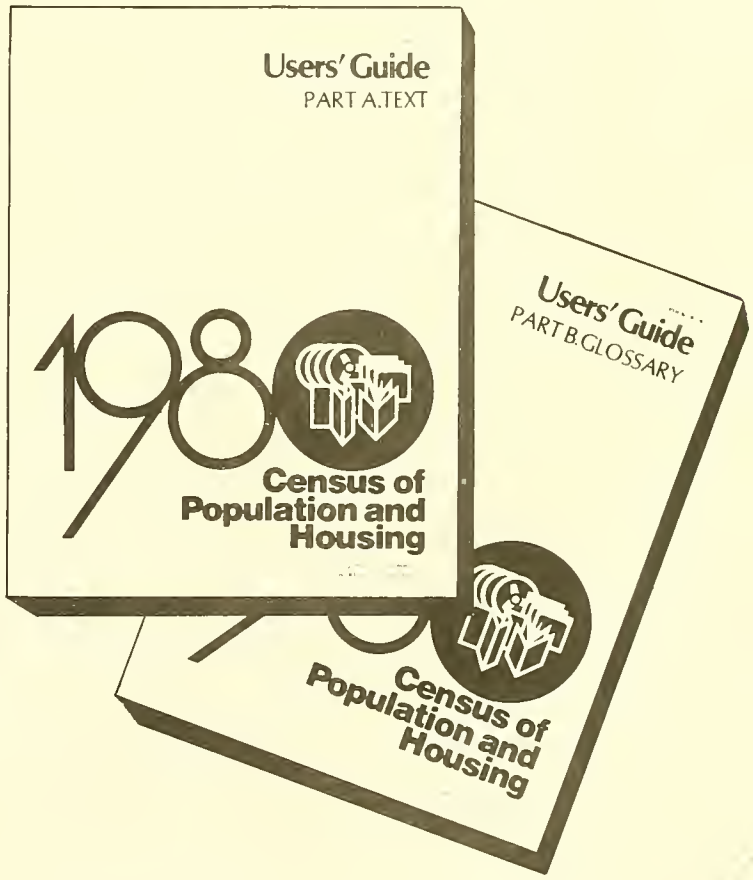

- Part A. Text—Covers census data subjects; geographic considerations; reports, tapes, maps, and other products; services available to users; and many other topics central to understanding and using 1980 census data.

- Part B. Glossary—Provides detailed definitions of population, housing, geographic, and technical terms associated with the census—especially important for people using 1980 data on tape or microfiche.

- Sources of Assistance—Furnishes addresses and phone numbers of public and private sector organizations offering a variety of products and services, such as tape processing, area profiles, training, and reference assistance.

- Updates—Provide information on new developments relating to the 1980 census. Each update is keyed to the particular point in "Part A. Text" that needs revision.

Part C, a table finder, and Part D, a guide to tape contents, are planned for publication later.

Order from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Specify the stock number (S/N) given below and make checks payable to Superintendent of Documents.

Part A. Text (S/N 003-024-03625-8)—$5.50. Supplement 1 (S/N 003-024-05004-8)—$6.00 (includes Part B. Glossary, Sources of Assistance, and Updates)
